Debt quality improves

CareEdge Debt Quality Index (CDQI) witnessed a notable uptick in FY22 from 89.51 in March 2021 to 92.24 in March 2022 largely driven by upgrades in rated debt, and enhancements in rated debt of higher-rated entities and reduction in debt of a large defaulting NBFC on restructuring. The CDQI saw an improvement in all the last five months of FY22. The March 2022 index rose to 92.24 from 91.96 in February 2022, due to the rating of the market borrowing programme of a large power finance company and enhancements in rated debt of other highly rated entities.
