Short-term Bank Facilities	35.00 (Reduced from 35.25)	CARE A1 (A One)	Revised from CARE A2 (A Two) and removed from Credit Watch with Developing Implications
<b>Total Bank Facilities</b>	<b>246.00</b> <b>(Rs. Two hundred forty-six crore only)</b>		

Details of instruments/facilities in Annexure-1

### Detailed Rationale & Key Rating Drivers

The ratings assigned to Syрма SGS Technology Limited (Syrma) were placed on 'Credit Watch with Developing Implications', following the intention of the company to merge SGS Teknıks Manufacturing Private Limited (SGS) with itself. CARE Ratings Limited takes note of the fact that the merger has now been called off and the company has acquired 100% stake in SGS.

Following the acquisition, the company's scale of operations has nearly doubled on a consolidated basis; business profile has improved with manufacturing plants across multiple locations, presence across diverse customer verticals, and access to a strong client profile in the domestic market.

The ratings factor in the experience of the promoters in the electronics industry and is further strengthened with the acquisition of SGS. The ratings continue to derive strength from the track record of operations with a strong product profile catering to diversified industries and strong relationships with reputed clients and suppliers.

The ratings are however constrained by the working capital-intensive nature of operations, which is further intensified by the shortage of semi-conductor chips, the technological obsolescence risk, and the high competition present in the industry.

### Rating Sensitivities

#### Positive Factors – Factors that could lead to positive rating action/upgrade:

- Consistent increase in the scale of operations with lower client/vertical concentration.
- Maintaining a comfortable capital structure as reflected by an overall gearing ratio of below unity.
- Successful completion of the IPO, leading to a primary infusion of Rs.926 crore in the company.
- Ability to integrate operations and derive synergies from the recent acquisition.

#### Negative Factors – Factors that could lead to negative rating action/downgrade:

- Any large debt-funded capex, marked by deterioration in capital structure.
- A drop in the operating margins below 10%.

### Detailed description of the key rating drivers

#### Key Rating Strengths

##### *Experienced promoters and established track record of the company*

Syrma belongs to the Tandon group, which started its first manufacturing unit in 1976 for the manufacture of floppy drives for IBM. The unit was the first hard disk drive (HDD) manufacturing unit in South Asia then. Mr Sandeep Tandon, Chairman of Syрма, has over two decades of experience in the electronics industry. By 2000, the group diversified to high-volume electronics manufacturing services for leading IT majors of the world. The group's range of products includes printed circuit boards (PCBs), magnetic disk drives, magnetic coils, RFID tags, etc. The promoters of the acquired entity – SGS – have more than three decades of experience in the electronics manufacturing industry, with operations across six manufacturing facilities. The company is led by four directors, who are also its founders. The promoters of the company are professionally qualified and have degrees in electronics engineering/management from reputed institutions. Mr J S Gurjal, who was the promoter of SGS, is now the Managing Director of Syрма.

<sup>1</sup>Complete definition of the ratings assigned are available at [www.careedge.in](http://www.careedge.in) and other CARE Ratings Ltd.'s publications

**Acquisitions of SGS and PerfectID:**

In November 2020, Syrma acquired a 20% stake in SGS. Funds of Rs.92.04 crore from private equity funds and other shareholders have been infused in Syrma in FY21, partly as equity and partly as preference capital, which has been utilised for the purpose of inorganic growth by way of acquisition of SGS. Earlier, SGS was to be merged with Syrma, however, the merger had been called off and Syrma has acquired 100% stake in SGS. The erstwhile promoters of SGS now hold 9.23% share each in Syrma, totaling to 37%.

SGS, incorporated in 1986, is an Indian EMS company that primarily assembles PCBs for its clients. In terms of customer and geographical profile, there is no overlap between Syrma and SGS, thereby diversifying the segment and client profile on a consolidated basis. Syrma also acquired 75% stake in Perfect ID India Private Limited in October 2021. PerfectID manufactures RFID label tags and passive inlay tags, which is in addition to the existing capabilities for the manufacturing of RFID hard tags, thus expanding the RFID products portfolio.

**Established track record in the EMS and ODM segment with strong product profile:**

The company's product profile consists of – PCBs, magnetic coils, magnetic tapes and RFID tags which cater to the requirements of reputed consumer durables companies. Syrma is technology-focussed engineering and design company engaged in turnkey electronics manufacturing services specialising in precision manufacturing. With acquisition of SGS, the company has added domestic customers also to its client profile. SGS which primarily assembles PCBs for its clients also has a long track record having commenced operations in 1990. On a consolidated level, the company operates through eleven manufacturing facilities in North India (i.e. Himachal Pradesh, Haryana and Uttar Pradesh) and south India (i.e. Tamil Nadu and Karnataka). The Company has three dedicated R&D facilities, two of which are located at Chennai, Tamil Nadu and Gurgaon, Haryana respectively, and one is located in Stuttgart, Germany.

**Strong relationships with reputed customers and suppliers**

The company caters to diverse end-use industries, including industrial appliances, automotive, healthcare, consumer products and IT industries. The industry profile includes FMCG, electronics etc on a standalone basis which stands to be further diversified with SGS catering to healthcare and automotive segment. On a standalone level, Syrma's product profile consists of – PCBs, magnetic coils, magnetic tapes and RFID tags of which PCB assemblies and RFID tags form major portion of the revenue. The company has a strong customer base including many globally reputed companies with whom it has a well-established relationship built over a long period. The company has maintained strong relationships with major consumer durable company and electronics company. The company also has strong supplier network with almost 60-65% of raw materials being imported.

**Comfortable debt coverage indicators**

The capital structure of the company has improved and was at a comfortable level, with an overall gearing of 0.26x as on March 31, 2021, as compared with 0.70x as on March 31, 2020. The interest coverage ratio is also healthy, at 8.94x in FY21. On a standalone basis, the debt profile, as on March 31, 2021, included term debts from banks, working capital borrowings, and lease liabilities.

**Key Rating Weaknesses:****Exposure to volatility of raw materials and forex rate fluctuations**

Syrma's raw materials consist of many components, including ICs, among others. Majority of the components, like chips and PCB ICs, are imported and Syrma has the liberty to choose the buyer in most cases. Most of the contracts of Syrma with its suppliers are back-to-back contracts. Also, though the prices with most of Syrma's customers are negotiated and agreed to initially, they are reviewed regularly. Recent times have seen a severe shortage of key components like ICs and this may also impact the operating margins and the working capital cycle of the company. Due to the high lead time for chips, which extends up to 52 weeks in some cases, the inventory-holding has increased. The company has to make advance payments in some cases to secure the raw materials, which has increased the working capital borrowings of the company. In the short term, this is expected to continue and the margins and working capital will remain affected by the shortage of semi-conductor chips.

**Technological obsolescence risk**

Electronics manufacturing companies are constantly exposed to obsolescence risk, which requires the company to keep up with the changes and advancements by constantly upgrading its products and technologies. But the company has seen and adapted to changes since inception and has been aware of the technological advancements, right from floppy disks manufacturing to RFID tags now. Syrma has recently forayed into manufacturing RFID tags, considering that the market for the same is expected to grow exponentially in future. The ability of the company to continuously enter new advanced product categories will be key to its future prospects.

**IPO and capex plans**

The company has filed a draft red herring prospectus (DRHP) with the Securities and Exchange Board of India (SEBI) for an initial public offering (IPO), to raise Rs.926 crore, of which Rs.571 crore will be for the capex, Rs.131 crore for meeting incremental working capital needs, and the balance for general corporate purpose. The capex will involve around Rs.38 crore for setting up a R&D facility in Chennai, Rs.108 crore for setting up and expanding the manufacturing facility at the Chennai Plant, around Rs.52 crore for setting up new manufacturing facilities in Hyderabad, around Rs.228 crore for setting up and expanding of manufacturing facilities in Manesar, around Rs.62 crore for setting up new facilities in Bawal, and around Rs.83 crore for setting up new facilities in Hosur.

As on date, minimal spending has taken place for the capex and there are no large debt commitments. The IPO will also have an offer for sale of 33.69 lakh share from one of the promoters.

### Industry and prospects

The global EMS market traditionally comprised of companies that manufacture electronic products, predominantly assembling components on PCBs and box builds for OEMs. EMS differs by service providers, and any particular partner may provide any combination of the following: PCB assembly, cable assembly, electro-mechanical assembly, contract design, testing, prototyping, and aftermarket services. The market in India is highly competitive and there are more than 30 organised companies in the EMS industry, but the commercial semi-conductor fabrication operation is almost non-existent. The competition concentration is moderate as the top three companies account for about 30% of the market. The companies follow either of the two unique business models – high volume/low mix or low volume/high mix.

In terms of government initiatives for the sector, the Indian Government is attempting to enhance manufacturing capabilities across multiple electronics sectors and to establish the missing links in order to make the Indian electronics sector globally competitive. India is positioned not only as a low-cost alternative but also as a destination for high-quality design work. Many multinational corporations have established or expanded captive centres in India. Post the COVID-19 pandemic, many global electronics manufacturers are contemplating on the China+1 strategy and looking for alternate manufacturing locations for exports business, which is advantageous to Indian manufacturers. Syrma's presence in the ODM segment offers the company a better position and margins. However, the company's ability to scale up operations amid the improved demand for the sector and the capability of the company to manage the shortage of raw materials and the working capital cycle remains key to the prospects.

### Liquidity: Strong

Most of the contracts of Syrma with its suppliers are back-to-back contracts. It procures its raw materials depending on the sales orders it receives from its customers. Hence, in most cases, the company pays its suppliers once it receives the money from its customers. Due to COVID, the shortage of containers and chips in the market, the lead time for the company has increased from four to six weeks to 15-16 weeks, and in some cases, up to 20-26 weeks.

The company also extends a longer credit period to its overseas customers, of around 95 days from the end of the month in which the invoice is booked. The actual collection period extends more than 120 days, depending on the date of the month the invoice is raised. In return, the company enjoys a credit period of around 60 days. This apart, the company had cash and bank balances of Rs.45 crore, as on November 30, 2021.

**Analytical approach:** Standalone financials considered for the past. However, CARE has considered the impact of the acquisition of 100% stake in SGS Teknics, and has consolidated the business and financial risk profile of the following companies as they operate in the similar line of business and are controlled by the same promoters. The entities consolidated

- (i) SGS Teknics Manufacturing Private Limited;
- (ii) Perfect ID India Private Limited;
- (iii) SGS Infosystems Private Limited; and
- (iv) SGS Solutions GmbH.

### About CARE Ratings Limited:

Established in 1993, CARE Ratings Ltd. is one of the leading credit rating agencies in India. Registered under the Securities and Exchange Board of India (SEBI), it has also been acknowledged as an External Credit Assessment Institution (ECAI) by the Reserve Bank of India (RBI). With an equitable position in the Indian capital market, CARE Ratings Limited provides a wide array of credit rating services that help corporates to raise capital and enable investors to make informed decisions backed by knowledge and assessment provided by the company.

With an established track record of rating companies over almost three decades, we follow a robust and transparent rating process that leverages our domain and analytical expertise backed by the methodologies congruent with the international best practices. CARE Ratings Limited has had a pivotal role to play in developing bank debt and capital market instruments including CPs, corporate bonds and debentures, and structured credit.

### Disclaimer

The ratings issued by CARE Ratings Limited are opinions on the likelihood of timely payment of the obligations under the rated instrument and are not recommendations to sanction, renew, disburse or recall the concerned bank facilities or to buy, sell or hold any security. These ratings do not convey suitability or price for the investor. The agency does not constitute an audit on the rated entity. CARE Ratings Limited has based its ratings/outlooks based on information obtained from reliable and credible sources. CARE Ratings Limited does not, however, guarantee the accuracy, adequacy or completeness of any information and is not responsible for any errors or omissions and the results obtained from the use of such information. Most entities whose bank facilities/instruments are rated by CARE Ratings Limited have paid a credit rating fee, based on the amount and type of bank facilities/instruments. CARE Ratings Limited or its subsidiaries/associates may also be involved with other commercial transactions with the entity. In case of partnership/proprietary concerns, the rating /outlook assigned by CARE Ratings Limited is, inter-alia, based on the capital deployed by the partners/proprietor and the current financial strength of the firm. The rating/outlook may undergo a change in case of withdrawal of capital or the unsecured loans brought in by the partners/proprietor in addition to the financial performance and other relevant factors. CARE Ratings Limited is not responsible for any errors and states that it has no financial liability whatsoever to the users of CARE Ratings Limited's rating.

Our ratings do not factor in any rating related trigger clauses as per the terms of the facility/instrument, which may involve acceleration of payments in case of rating downgrades. However, if any such clauses are introduced and if triggered, the ratings may see volatility and sharp downgrades.
