Detailed Rationale & Key Rating Drivers

The ratings of Oil India Limited (OIL) continue to consider its majority ownership by the Government of India (GoI) and its strategic importance in supporting the country's energy security and development of hydrocarbon reserves in North-East India. The ratings also draw comfort from the experienced and professional management, the company's long track record of exploration and production (E&P) operations spanning more than a century in the same hydrocarbon basins, its adequate reserves, robust infrastructure for hydrocarbon extraction, and proven technical capabilities in E&P with added presence across various segments in oil and gas sector through group entities. The ratings have also taken into cognizance OIL's strong financial risk profile marked by high profitability and strong liquidity.

The ratings, however, remain susceptible to risk related to E&P business, volatility associated with prices of crude oil, regulatory risk, and large capital expenditure (Capex) plans.

Rating Sensitivities

Positive Factors: NA

Negative Factors:

- Increase in overall gearing (net of cash) beyond 0.6x
- Decline in liquidity position due to decrease in free cash & bank balance along with current investment below Rs. 1,000 crore
- Reduction in the GoI stake to less than 51%.

Detailed description of the key rating drivers

Key Rating Strengths

Majority ownership by GoI along with its strategic importance

OIL was established in 1889 as Burma Oil Company (BOC) with the first discovery of crude oil in Digboi (Assam). In 1981, it became a wholly-owned GoI enterprise and came out with IPO in 2009. As on December 31, 2020, GoI held 56.66% equity capital in OIL while the major oil marketing companies (viz Indian Oil Corporation Ltd, Bharat Petroleum Corporation Ltd & Hindustan Petroleum Corporation Ltd) jointly held 9.87% equity capital.

OIL is the second-largest premier Indian national oil company engaged in the business of exploration, development, and production of crude oil and natural gas, transportation of crude oil, and production of LPG. It contributed around 9.73% to India's total crude oil production and around 8.56% to India's natural gas production during FY20 and built adequate domestic reserves (2P) of 74.69 million metric tonnes (MMT) and 60.07 billion cubic metres (BCM) of crude oil and natural gas with exploration rights over 60 blocks, primarily in the onshore regions of Assam, Arunachal Pradesh and Rajasthan region and overseas reserves (2P) of 34.44 million metric tonnes (MMT) and 22.37 billion cubic metres (BCM) of crude oil and natural gas respectively as on March 31, 2020 respectively. It continues to be of strategic importance in the Indian energy sector as it plays a crucial role in the implementation of GoI policies in the oil & gas sector, with added presence across various segments in oil and gas sector.

Experienced management

OIL is managed by a team having substantial experience in oil and gas industry. Mr. Sushil Chandra Mishra is the Chairman and Managing Director of OIL with an experience of over 35 years in diverse fields of strategic planning, E&P projects, corporate

affairs and business development. Mr. Harish Madhav, Director (Finance) is a member of the Institute of Chartered Accountants of India (ICAI) and has over 30 years of rich and varied experience in diverse fields of financial & treasury management, corporate accounts and audit. Dr. P. Chandrasekaran, Director (Exploration & Development), is a post-graduate in Geology and has done Ph.D from IIT Roorkee and has an experience of over 35 years in various facets of petroleum exploration. Dr. P K Sharma, Director (Operations) have experience of over 34 years in E&P industry in India and abroad. Mr. Biswajit Roy, Director (HR& BD) has over 33 years of experience in diverse functions including marketing, operations, business development and HR. Furthermore, other senior management of the company also has vast experience in the oil and gas industry.

Robust infrastructure and proven technical capabilities

Oil & gas industry is a capital expenditure intensive industry, and thus requires large funds as well as time to develop a sound infrastructure. With its long track record of operations, it has developed advanced in-house technical capabilities in exploration-related services including seismic, drilling and oilfield services, recovery and reservoir management, etc. Furthermore, the company has accumulated a large collection of raw and proprietary geological data relating to offshore and onshore regions in India, and thus providing it with a competitive edge over its competitors. The company has been effectively replenishing more reserves by maintaining the reserve replacement ratio (RRR) consistently above 1 and of 1.15 in FY20.

Presence across various segments in oil and gas sector

From an E&P player, OIL has gradually expanded its operations in refining, petrochemicals and renewable power, thereby making a presence across the hydrocarbon value chain. In downstream operations (refining and marketing), it has 26% stake in NRL, which operates a 3MMTPA refinery in Numaligarh (Assam), 5% stake in Indian Oil Corporation Ltd and has 10% stake in Brahmaputra Cracker and Polymer Ltd (BCPL), which is establishing a gas-cracker project at Dibrugarh (Assam). Furthermore, OIL operates transportation pipelines of 1,157 km for crude oil and 660 km for multi-product, along with ownership of 23% equity in 192km DNP Ltd which has established natural gas pipeline from Duliajan to Numaligarh (Assam). OIL also has renewable energy installed capacity of 188 MW (Wind energy 174 MW & Solar energy 14 MW).

Strong financial profile

OIL has reported total operating income (TOI) of Rs. 13,554 crore in FY20 as against Rs. 15,056 crore in FY19, registering a decline of 10% primarily on account of fall in international crude oil prices leading to a decline in crude oil realization by -11.31% and quantity sold by -5.26%. Its PBILDT margin has also declined by 250 bps to 43.89% in FY20 (FY19: 46.39%) mainly on account of lower crude oil realization. The debt metrics stood comfortable with overall gearing at 0.38x as on March 31, 2020 (PY: 0.45x) along with interest coverage ratio of 11.93x in FY20 (PY: 14.56x).

H1FY21: The company has posted TOI of Rs. 4,155 crore in H1FY21 as against Rs. 6,978 crore in H1FY20. The decrease is due to a decline in crude price realization by 43% and natural gas price realization by 35% along with the decline in crude oil production by 8.04%. The realization has improved in Q2FY21 from Q1FY21 due to improvement in crude oil prices and slow recovery in economy subsequent to removal of lockdown imposed to control the spread of COVID 19. The PBILDT margin also declined to 28.31% in H1FY21 (42.80% in H1FY20) and the company posted a loss at PAT level of Rs. 9.66 crore.

The Baghjan gas well blowout occurred in May 2020 has impacted operations of the company for few days due to protests and bandhs in and around Baghjan area. It led to production loss of natural gas by 0.12 BCM and of crude oil by 46.79 MMT. The well has come under control in December 2020 after the successful gas diversion operation to a nearby early production setup (EPS) followed by snubbing operation to kill the well.

Key Rating Weaknesses

Risk related to E&P business and crude oil

The E&P business is a highly capital-intensive business with a long gestation period. The exploration activity involves high uncertainty concerning estimation of reserves as it is a function of the quality of the available data and the engineering and geological interpretation. OIL has also been investing a large amount on capital expenditure in line with its exploratory efforts in terms of survey and exploratory wells. As most of the major producing fields enter into natural decline phase, the company has deployed various Improved Oil Recovery (IOR) and Enhanced Oil Recovery (EOR) programmes to maintain a healthy reserve replacement ratio (RRR).

Furthermore, the company is also exposed to crude oil price risk since majority of OIL's revenue is derived from sale of crude oil and related products. Therefore, any decrease in the price of the crude oil may hamper the profitability of the company. Prices of crude oil depend on various factors including policies by major producers of crude oil, global as well as regional demand variations, geopolitical situations and market sentiment. The crude price (Brent) plummeted sharply by 16% through January 2019 – December 2020, touching a low of USD 19/bbl in April 2020, triggered by a supply glut in the market led by Saudi Arabia and Russia which was further aggravated by a worldwide slump in demand for petroleum products due to COVID-19 pandemic. However, crude prices have recovered to the level of around \$50/bbl by December 2020.

Aggressive capex plans

During the last couple of years, the average capex of OIL per annum has been in the range of Rs 3,800 to Rs 4,300 crore with about 24-28% expenditure on development drilling, 22-23% expenditure on exploration drilling, 23-27% expenditure on capital equipment, 10-14% on overseas project and balance 9-20% on surveys, R&D. The same trend is expected to continue in the ensuing years. The company has planned for Capex of Rs. 3877 crore in FY21 which will be majorly funded from internal accruals and free cash and bank balance available. For the overseas project in Mozambique, OIL has invested total of \$1,275 million dollars through foreign bonds and External commercial borrowing (ECB) till December 30, 2020.

Regulatory risk

OIL's profitability and cash accruals are susceptible to GoI's policies with respect to sharing of under-recoveries arising from discount allowed to oil refineries, natural gas pricing (Administered Price Mechanism), subsidy sharing, and dividend payments. During elevated prices of crude, the GoI may choose to pass on the fiscal burden via sharing of profits of PSUs through higher fiscal levies, higher dividend declaration or providing discounts to OMCs thus affecting profitability of OIL. Therefore, any adverse policy decision by GoI remains a key risk.

Liquidity: Adequate

OIL's liquidity remains strong as indicated by current ratio of 1.67x as on March 31, 2020 (PY: 1.29x). The operating cycle of the company increased to 66 days in FY20 from 60 days in FY19 mainly on account of increase in inventory days to 59 days (PY: 51 days). Further, OIL has free cash & bank balance along with current investment of Rs. 3,438 crore on January 15, 2021. OIL derives financial flexibility from its GoI parentage and comfortable leverage structure which ensures easy access to funds at attractive rates.

Analytical approach: Standalone with notching based on linkages with the Government of India.

About the Company

OIL was established as Burma Oil Company (BOC), with first discovery of crude oil in Digboi (Assam) in 1889. 'Oil India Private Ltd' was incorporated on February 18, 1959 and later became 50:50 joint venture (JV) among BOC and GoI. In 1981, it became a wholly-owned GoI enterprise and came out with an IPO in 2009. OIL, a Navratna PSU, is engaged in exploration, development and production of crude oil and natural gas, transportation of crude oil and production of LPG. OIL also provides various E&P related services and holds 26% equity in Numaligarh Refinery Ltd (NRL) which is operating a 3 million metric tonnes per annum (MMTPA) refinery at Numaligarh (Assam).

About CARE Ratings:

CARE Ratings commenced operations in April 1993 and over two decades, it has established itself as one of the leading credit rating agencies in India. CARE is registered with the Securities and Exchange Board of India (SEBI) and also recognized as an External Credit Assessment Institution (ECAI) by the Reserve Bank of India (RBI). CARE Ratings is proud of its rightful place in the Indian capital market built around investor confidence. CARE Ratings provides the entire spectrum of credit rating that helps the corporates to raise capital for their various requirements and assists the investors to form an informed investment decision based on the credit risk and their own risk-return expectations. Our rating and grading service offerings leverage our domain and analytical expertise backed by the methodologies congruent with the international best practices.

Disclaimer

CARE's ratings are opinions on the likelihood of timely payment of the obligations under the rated instrument and are not recommendations to sanction, renew, disburse or recall the concerned bank facilities or to buy, sell or hold any security. CARE's ratings do not convey suitability or price for the investor. CARE's ratings do not constitute an audit on the rated entity. CARE has based its ratings/outlooks on information obtained from sources believed by it to be accurate and reliable. CARE does not, however, guarantee the accuracy, adequacy or completeness of any information and is not responsible for any errors or omissions or for the results obtained from the use of such information. Most entities whose bank facilities/instruments are rated by CARE have paid a credit rating fee, based on the amount and type of bank facilities/instruments. CARE or its subsidiaries/associates may also have other commercial transactions with the entity. In case of partnership/proprietary concerns, the rating /outlook assigned by CARE is, inter-alia, based on the capital deployed by the partners/proprietor and the financial strength of the firm at present. The rating/outlook may undergo change in case of withdrawal of capital or the unsecured loans brought in by the partners/proprietor in addition to the financial performance and other relevant factors. CARE is not responsible for any errors and states that it has no financial liability whatsoever to the users of CARE's rating.

Our ratings do not factor in any rating related trigger clauses as per the terms of the facility/instrument, which may involve acceleration of payments in case of rating downgrades. However, if any such clauses are introduced and if triggered, the ratings may see volatility and sharp downgrades.
