Details of instruments/facilities in Annexure-1.

### Rationale and key rating drivers

To arrive at the ratings of AmpIn Energy Transition Private Limited (AETPL, formerly known as AMP Energy India Private Limited), CARE Ratings has considered the consolidated financial statements of the company wherein Cluster-II, III, IV and V of the group are getting consolidated. The ratings upgrade on the long term and short term bank facilities of AETPL factors in tie up of additional equity amounting to \$250 million from multilateral/global banks and funds which is adequate to fund the large-scale under implementation projects beyond the present pipeline of ~2.4 GWp thereby auguring well for its growth prospects. As on September 2023 end, against the committed line - of \$250 million, AETPL has received an infusion of \$85 million while \$40 million is expected to be received in Q3FY24 and balance in FY25-FY26.

CARE Ratings also positively factors in the increase in equity infusion by Copenhagen Infrastructure Partners (CIP) from ~\$18 million as on June 2022 end to ~\$55 million as on August 2023 end towards the aforementioned capacities under development. Apart from developing the pipeline capacity, the fresh equity infusion is likely to be utilised towards re-acquiring ~100 MWp assets held in cluster I which were previously sold off to Amp Solar Asia Holdings Pte. Limited, Singapore (ASAH). The company also intends to initially consolidate its holdings in cluster II by acquiring stakes from its existing investors i.e., Sumitomo Mitsui Banking Corporation (SMBC) and Core Infrastructure India Fund (CIIF) and subsequently may offload minority stake in the combined capacity (including cluster I, II and III). Going forward, the group is likely to raise non-project debt upto ~Rs. 350 crore which along with the fresh equity proceeds would support the mentioned initiatives. CARE Ratings notes that the existing equity commitment is adequate to fund under development capacities as well as fulfil consolidation related initiatives.

The operating capacity of the company on August 2023 end stood at ~375 MWp as against ~288 MWp as on June 2022 end. CARE Ratings draws comfort from satisfactory operational performance from ~250+ MWp existing capacity which has been operational for more than a year. While the operating capacity has not increased remarkably over the last 12 months primarily due to the elevated module prices, CARE Ratings notes that incremental capacity of ~550 MWp is in an advanced stage of development and likely to get commissioned by FY24 end. The ratings continue to factor in the revenue visibility on account of presence of long-term power purchase agreements (PPAs) for the underlying capacity and low counterparty credit risk given the strong credit profile of the offtakers.

The aforementioned rating strengths are however tempered by the company's leveraged capital structure, attributed to the debt funded capex incurred for setting up the present capacity and large portion of non-commissioned projects. The indebtedness of the company is slated to further rise given 2.4+ GWp capacity under development. As per CARE Ratings' base case, [(Total Debt)/(1 year forward adjusted EBITDA)] (Adjusting for the development fee) is expected to remain around 6.5x over the near term. Any adverse variation in the same would be critical from a credit standpoint. Further, the ability of the company to commission this capacity without material time and cost overruns along with attaining debt funding at competitive rates would remain a key monitorable from credit perspective. While the operating PLF has been reportedly in line with the P 90 level, the cash flows of the company continue to remain exposed to adverse variation in weather conditions given the single part tariff for the projects.

### Rating sensitivities: Factors likely to lead to rating actions

#### Positive factors

- Improvement in operating performance of the commissioned capacity with annual PLF surpassing P-90 levels on a sustained basis
- Improvement in capital structure and coverage indicators for AETPL (consolidated) leading to Total Debt/1 year forward adjusted EBITDA below 6.0x on a sustained basis

<sup>1</sup>Complete definition of the ratings assigned are available at [www.careedge.in](http://www.careedge.in) and other CARE Ratings Ltd.'s publications

**Negative factors**

- Significantly lower than envisaged P-90 generation for the operational projects under AETPL on continued basis thus negatively impacting the cash flows and debt coverage indicators at AETPL consolidated levels
- Slower than expected deleveraging of the portfolio resulting in Total Debt/1 year forward adjusted EBITDA crossing 7.2x on a sustained basis
- Sustained increase in the non-project debt at the group level beyond Rs. 500 crore

**Analytical approach:** Consolidated

CARE Ratings has considered consolidated financials of AETPL for assessing its credit risk profile. The list of subsidiaries getting consolidated under AETPL as on March 31, 2023 is attached as Annexure 6.

**Outlook:** Stable

The Stable outlook on the CARE A- rating of AETPL reflects CARE Ratings' opinion that the company will be able to scale up its operating portfolio by commissioning the underlying projects within the scheduled timelines. Further, the outlook is supported by the presence of long term PPAs for the underlying capacities.

**Detailed description of the key rating drivers:****Key strengths****AETPL follows a cluster based approach for developing renewable energy projects and is backed by multiple financial investors**

AETPL is a renewable energy platform which was incorporated in 2016. The company follows a cluster based approach with AETPL being responsible for executing and managing the projects. The clusters that are formed below AETPL have external investors who also participate in funding its overall capital requirements. AETPL had initially received incubation funding from AmpSolar Group Inc., Canada and thereafter developed ~100 MWp assets under cluster I, which were subsequently sold to ASAH. Prior to the recently committed capital contribution of \$250 million from SMBC, Intermediate Capital Group (ICG) and Asian Infrastructure Investment Bank (AIIB), AETPL had received ~\$50 million funding from LGT Lightrock in two tranches.

As on September 30, 2023, there are four active clusters under AETPL (Cluster-I is held by ASAH and AETPL only gets the management fee from those assets). Cluster II has investments from CIIF and SMBC (\$36 million on a combined basis) apart from the investments from AETPL, Cluster III has 100% investments from AETPL whereas Cluster IV and V wherein the company is developing ~2.4 GWp projects has investments from CIP and AETPL. CIP and AETPL have committed \$150 million each for Cluster IV & V. While, the capital is proportionately contributed by the investors of the respective clusters, AETPL is solely responsible for developing the underlying projects and on a standalone basis earns development fees which is utilised for meeting the operating costs at the standalone level. AETPL earned development fee of ~Rs. 90 crore for FY23 and the same is projected to remain between Rs. 120-140 crore annually over the next 3 years.

**Enhanced capital commitments to aid development of underlying capacity**

AETPL has tied up fresh equity amounting to \$250 million from SMBC, ICG and AIIB which augurs well for the growth of the company given the large-scale projects of ~2.4 GWp pending execution. As on September 2023 end, AETPL has received an infusion of \$85 million and another \$40 million is expected to be received in the next few weeks. CARE Ratings also positively factors in the increase in capital commitments by \$50 million from CIP along with increase in actual equity infusion from ~\$18 million as on June 2022 end to ~\$55 million as on August 2023 end towards the aforementioned capacities under development. Apart from developing the pipeline capacity, the fresh equity infusion is likely to be utilised towards re-acquiring ~100 MWp assets held in cluster I which were previously sold off to ASAH. The company also intends to initially consolidate its holdings in cluster II by acquiring stakes from its existing investors i.e., Sumitomo Mitsui Banking Corporation (SMBC) and Core Infrastructure India Fund (CIIF) and subsequently may offload minority stake in the combined capacity (including cluster I, II and III). Going forward, the group is likely to raise non-project debt upto ~Rs. 350 crore which along with the fresh equity proceeds would support the mentioned initiatives. CARE Ratings notes that the existing equity commitment is adequate to fund under development capacities as well as fulfil consolidation related initiatives.

**Satisfactory operational performance for operational portfolio; Nameplate capacity of ~550 MWp in advanced stages of development**

AETPL 375 MWp of operating capacity as on August 2023 end. Out of the same, 250 MWp capacity has had a generation track record of more than a year. The operational performance of these assets has improved with FY23 PLF being in line with the P-90 estimates. Moreover, the collection performance has remained satisfactory with average receivable cycle (including unbilled revenue) remaining below 60 days.

CARE Ratings notes that the operating capacity increased marginally by ~75 MWp over the last 12 months as capacity addition was adversely impacted due to the elevated module prices. However, the macro environment has turned benign since the last six months with module prices at an all-time low which augurs well for the under-construction capacity. CARE Ratings also notes that incremental capacity of ~550 MWp is in an advanced stage of development and likely to get commissioned by FY24 end.

#### **Revenue visibility on account of presence of long term PPAs for the entire operational capacity**

AETPL has low offtake risks owing to the presence of long-term PPAs with C&I counterparties having strong credit profiles for all the operational capacity. Also, most of the operational projects are under group captive scheme, wherein the counterparty has to make equity investment in the respective SPVs equivalent to a minimum of 26% of the total equity requirement for executing the projects which mitigates the risk of project abandonment or non-performance of obligations by the power purchaser under the PPAs. CARE Ratings also notes that PPAs for most of the utility scale projects under development are already in place thereby providing revenue visibility over the long run.

#### **Strong counterparty credit profile for the portfolio**

The offtakers for AETPL's operational portfolio comprises C&I customers most of which have strong credit profiles. This mitigates the counterparty credit risk for the company. CARE Ratings notes that, the group has no exposure to any of the state distribution utilities thereby mitigating counterparty related risks. Going forward, the company has 2.4 GW of projects under development, wherein the offtakers profile is strong. The under construction capacity is tied up with SECI, RUMSL, Amazon and CESC Ltd.

#### **Key weaknesses**

##### **Leveraged capital structure of the company continues to remain high**

AETPL has leveraged capital structure on a consolidated level on account of debt funded capex incurred for setting up renewable energy projects. Going forward, the company is expected to incur a capex of ~Rs 10,000 crore which is likely to be funded in a debt-equity mix of 3:1. Given the high capex, the  $[(\text{Total Debt})/(\text{1 year forward adjusted EBITDA})]$  (Adjusting for the development fee) is expected to remain around 6.5x over the near term. Any adverse variation in the same would be critical from a credit standpoint.

CARE Ratings also notes that AETPL also has non-project debt of ~Rs. 115 crore which is expected to increase upto Rs 350 crore going forward which will be utilised for reacquiring cluster I assets and supporting future capacity expansion. Sustained increase in the non-project debt at the group level beyond Rs. 500 crore would be a negative trigger from a credit perspective.

##### **Large projects under implementation thereby exposing the company to execution risks**

As on August 2023 end, the group has an under-implementation portfolio of 2.4+ GWp and as a result the group remains exposed to project execution risks. The company's ability to secure required approvals/land and commission the projects as per the envisaged timelines and estimated cost remains critical as any material time or cost related overrun may adversely impact project level returns. CARE Ratings notes that the company has tied up long-term debt for ~0.5 GWp of its under-construction capacity, however, timely achievement of financial closure for the remaining ~1.9 GWp under-implementation capacity and availability of long-tenure debt at cost competitive rates would continue to be a key credit monitorable.

##### **Vulnerability of cash flows to variation in weather conditions**

Given the single part tariffs for its assets, the company is susceptible to vagaries of weather conditions and/or equipment quality thus translating into variable revenues. This, in turn, would affect company's cash flows and debt servicing ability. However, CARE Ratings notes that the projects under the group are located in multiple locations across the country and hence geographical concentration risk is mitigated to an extent.

#### **Liquidity: Adequate**

The liquidity of the company is adequate as reflected by free cash and bank balance of ~Rs 756 crore on consolidated level as on August 2023 end. The liquidity has been buoyed by the recent fresh infusion of capital by AIIB and ICG. The same is expected to be deployed in the underlying projects. The present equity line of \$250 million are expected to adequately meet the onward equity requirements for the projects in under development phase.

Going forward, CARE Ratings estimates the generation performance to be line with designed energy estimates and collections to remain timely given the strong counterparty credit profile for the portfolio.

### About us:

Established in 1993, CARE Ratings is one of the leading credit rating agencies in India. Registered under the Securities and Exchange Board of India, it has been acknowledged as an External Credit Assessment Institution by the RBI. With an equitable position in the Indian capital market, CARE Ratings provides a wide array of credit rating services that help corporates raise capital and enable investors to make informed decisions. With an established track record of rating companies over almost three decades, CARE Ratings follows a robust and transparent rating process that leverages its domain and analytical expertise, backed by the methodologies congruent with the international best practices. CARE Ratings has played a pivotal role in developing bank debt and capital market instruments, including commercial papers, corporate bonds and debentures, and structured credit.

### Disclaimer:

The ratings issued by CARE Ratings are opinions on the likelihood of timely payment of the obligations under the rated instrument and are not recommendations to sanction, renew, disburse, or recall the concerned bank facilities or to buy, sell, or hold any security. These ratings do not convey suitability or price for the investor. The agency does not constitute an audit on the rated entity. CARE Ratings has based its ratings/outlook based on information obtained from reliable and credible sources. CARE Ratings does not, however, guarantee the accuracy, adequacy, or completeness of any information and is not responsible for any errors or omissions and the results obtained from the use of such information. Most entities whose bank facilities/instruments are rated by CARE Ratings have paid a credit rating fee, based on the amount and type of bank facilities/instruments. CARE Ratings or its subsidiaries/associates may also be involved with other commercial transactions with the entity. In case of partnership/proprietary concerns, the rating/outlook assigned by CARE Ratings is, inter-alia, based on the capital deployed by the partners/proprietors and the current financial strength of the firm. The ratings/outlook may change in case of withdrawal of capital, or the unsecured loans brought in by the partners/proprietors in addition to the financial performance and other relevant factors. CARE Ratings is not responsible for any errors and states that it has no financial liability whatsoever to the users of the ratings of CARE Ratings. The ratings of CARE Ratings do not factor in any rating-related trigger clauses as per the terms of the facilities/instruments, which may involve acceleration of payments in case of rating downgrades. However, if any such clauses are introduced and triggered, the ratings may see volatility and sharp downgrades.
