

Osho Forge Limited

November 28, 2024

Facilities/Instruments	Amount (₹ crore)	Rating ¹	Rating Action
Long Term Bank Facilities	47.35 (Reduced from 52.65)	CARE BBB; Stable	Reaffirmed

Details of instruments/facilities in Annexure-1.

Rationale and key rating drivers

While arriving at the rating of Osho Forge Limited (OFL), CARE has taken a combined view of OFL and Emson Gears Limited [EGL; rated CARE BBB; Stable], as both companies (together referred to as 'Group') have common promoters, common management, and operational linkages.

The reaffirmation of rating assigned to the bank facilities of OFL considers the improvement in profitability during FY24 (refers to the period April 01 to March 31) & H1FY25 (refers to the period April 01 to September 30) albeit moderation in scale of operations during FY24 and average financial risk profile of the group. The rating further derives comfort from the experienced promoters with long track record of operations, business synergies due to operational linkages within the group, well-established clientele, stable demand outlook from automobiles albeit competitive auto-component industry and cyclical end-user automobile industry. The rating, however, remain constrained due to elongated operating cycle, susceptibility of margins to volatility in raw material prices, inherent cyclicity of the auto component industry.

Rating sensitivities: Factors likely to lead to rating actions

Positive factors

- Improvement in group's Total operating income (TOI) above Rs. 700 crores with Profit Before Interest, Lease, Depreciation, and Tax (PBILDT) margin at 9.00% on sustained basis.
- Improvement in the group's operating cycle below 60 days on sustained basis.
- Improvement in group's capital structure as marked by overall gearing below 0.75x on sustained basis.

Negative factors

- Decline in group's scale of operations with TOI falling below Rs. 400 crore with PBILDT below 7.00% on a sustained basis.
- Deterioration in group's capital structure as marked by overall gearing above 1.25x on sustained basis.

Analytical approach: Combined

The combined financials of OFL and EGL have been considered; Since, both the companies are in the same line of business, have same promoters and group synergies and are controlled by a common management team. The income derived from intra-group sales amounting to Rs. 135.14 (Rs.122.88 crore in FY23) accounted for ~24% of the total gross operating income during FY24.

Outlook: Stable

The 'Stable' outlook reflects CARE Ratings' expectation that the company is likely to maintain its operating & financial risk profile over the near to medium term.

Detailed description of key rating drivers:

Key strengths

Improvement in profitability albeit moderation in scale of operations during FY24: TOI of the group witnessed moderation of ~9% during FY24 and stood at Rs. 425.93 crores led by moderation in sales realisations for pinions, crown wheels & gears majorly on account of correction in commodity prices observed during the last fiscal year. However, group was able to improve the operating profitability margins with PBILDT margin of 8.36%, as against 7.93% during the last fiscal year; moderation in raw-material prices & exercising control over operational & administrative expenses have helped the group in improving the operating profit margins.

The group has achieved TOI of Rs. 204.65 crores with PBILDT margin of 9.15% during H1FY25.

Care Ratings expects operational performance of the group to improve over the medium term led by ongoing capex for increase in the installed capacity.

¹Complete definition of ratings assigned are available at www.careedge.in and other CARE Ratings Limited's publications.

Average financial risk profile: The overall gearing and Total debt to gross cash accruals (TD/GCA) of the group stood moderate at 1.08x & 6.76x, respectively as on March 31, 2024. Further, the interest coverage ratio remained moderate at 2.53x during FY24. Owing to higher working capital requirements & additional term loan availed for procurement of machineries, debt coverage indicators of the group are expected to remain moderate over short to medium term.

Interest coverage ratio of the group stands at 2.85x during H1FY25.

Further, the group's ability to maintain its average financial risk profile while managing its working capital requirements would remain a key monitorable from credit perspective.

Business synergies due to operational linkages within the group: EGL procures raw material (forged components and semi-finished components) largely from its group company OFL. EGL then provides value addition to the product (through machining) and subsequently sells the product to the client. Given the significant operational linkages within the group, the operational risk on account of dependence on outside suppliers for raw materials remains low. OFL offers a credit period of 100-120 days to EGL. Additionally, starting from FY24, EGL has also begun supplying materials to OFL under similar credit terms.

Well-established clientele, albeit high customer concentration risk : The group has established relationship with Original Equipment Manufacturers (OEM's) such as Mahindra & Mahindra (M&M; rated CARE AAA; Stable/ CARE A1+), International Tractors Limited , SML Isuzu Limited etc. Further, the reputed client base ensures timely payments and lends comfort to the revenue realisation. The group has been associated with these customers for more than 16 years and receives regular orders from them. The OEMs have a rigorous supplier selection process, involving prototype development, product testing, and review of operating facilities, besides other benchmarking processes. The supplier selection process can range from two to three years, and it is only after a rigorous and lengthy process that a supplier is selected for regular supply by OEMs. However, EGL faces customer concentration risk with M&M accounting for ~43% of its total revenue in FY24 (~53% in FY23) and the balance is fragmented across various players. Further, the revenue stream of OFL is concentrated with ~42% of the income being derived from its group concern EGL in FY24 (~47% in FY23). Apart from that ~23% of OFL's total revenue in FY24 was derived from M&M (~24% in FY23) while the balance income was fragmented across various players. However, the group has an established relationship with its customers and gets regular orders from them; the income is dependent on the business operations of its clientele and their future growth plans.

Experienced promoters with long track record of operations: The group was promoted by Mr. Ashok Dhall and Mr. Gautam Dhall. The promoters/directors have rich experience of around four decades in the industry. Both the promoters are involved in the overall business operations of the group and are ably supported by a team of professionals who are highly experienced in their respective domains. To fund various business requirement of the group in the past, regular funds have been infused by the promoters and related parties which stood at Rs. 31.95 crores as on March 31, 2024.

Stable demand outlook from automobiles albeit competitive auto-component industry and cyclical end-user automobile industry: The Indian auto component industry is a crucial component of the OEM value chain, driving consistent demand for industry participants. The organized segment consists of original equipment manufacturers (OEMs) that specialize in the production of high-value, precision-engineered components, while the unorganized segment primarily focuses on lower-cost products for aftermarket applications, resulting in intense competition. The group's product portfolio is exclusively aligned with the automotive sector, making its growth directly dependent on the domestic automotive industry's performance, which is inherently cyclical and influenced by macroeconomic conditions. A significant challenge faced by indigenous component manufacturers is the limited adoption of advanced technologies and relatively low R&D investment, which places them at a competitive disadvantage compared to organized players. Mid-sized organized entities such as Osho Forge and Emson Gears have demonstrated a higher level of technological integration and R&D focus, providing them with a competitive edge over unorganized competitors.

Key weaknesses

Elongated operating cycle: The group has huge product portfolio with over 480 SKUs leading to high level of inventory holding in form of WIP and finished goods. As on March 31, 2024 the inventory holding stood at 110 days. (Previous Year (PY):89 days). On the customer side, the group has a well-established and reputed customer base to which it extends a credit period of upto 120 days leading to average collection days stood at 60 days, as on March 31, 2024 (PY: 51 days). On the raw material procurement side, the group is offered payment terms ranging from 80 days to 150 days by its suppliers leading to average creditors days of 71 days as on March 31, 2024 (PY: 57 days). The operations of the group are thus working capital intensive resulting in elongated operating cycle of 100 days in FY24 (PY: 84 days).

Susceptibility of margins to volatility in raw material prices and foreign exchange risk: The operations of the group are raw material intensive in nature with the raw material cost constituting ~58% of the income in FY23-24 period. With global steel prices highly volatile in nature and susceptible to speculative trading, the margins of group are exposed to raw material fluctuation risk. Given large variety of products being manufactured for different types of customers, which necessitates large inventory holding, the margins are exposed to any adverse movement in the raw material prices. The raw materials are completely procured from domestic markets. With initial cash outlay for procurement in domestic currency and some part of sales realization on in foreign currency, the group is exposed to the fluctuation in exchange rates as group does not undertake any foreign exchange hedging.

Presence in competitive auto-component industry and cyclical automobile industry:

The Indian auto component industry is a critical part of the OEM value chain. An organized segment of this industry includes original equipment manufacturers (OEMs) who are engaged in the manufacture of high-value precision instruments, while the unorganized segment comprises of low-valued products catering to after-market services, resulting in high competition. However, one of the main challenges faced by the indigenous component manufacturers is the low-level of technology adaptation and R&D intensity which gives an edge to organized players.

Liquidity: Adequate

Liquidity position of the group is characterized by an above unity current ratio since last 5 fiscal years. The repayment obligations of the group stood at Rs. 16.40 crore for FY25 as against the expected gross cash accruals of around Rs.22.92 crores. Operating cycle has remained higher at 100 days during FY24 on account of working capital intensive nature of operations. Although, average working capital utilization has remained high at around 90-95% for last twelve months ending September 2024. However, it has unencumbered cash and cash equivalents to the tune of around Rs.12 crore as on March 31, 2024. The group would be incurring capex of around Rs. 40-45 crores during FY25 & FY26 for procurement & installation of machineries to increase the capacity that will be funded through long term bank debt & infusion of unsecured loans by the promoters.

OFL belongs to the Emson Group of Punjab, founded in 1970 and has a group company EGL. EGL was incorporated as a partnership firm in 1970, by the name, 'M/s Emson Sales'. In April 1996, the firm was reconstituted as a closely held company to take-over the business carried out under the firm. EGL is engaged in the manufacturing and selling of automobile parts such as differential and transmission gears, crown wheels and pinions, etc. OFL is a closely held company incorporated in June 1993. It is engaged in the manufacturing of automobile parts such as axles, bull gears and shafts. The company has both forging and machining facilities at its manufacturing plants. The manufacturing facilities of the group are located in Ludhiana, Punjab and parts manufactured are primarily sold to OEMs (Original Equipment Manufacturers) based in India catering to the tractor and commercial vehicle industry. The group is promoted by Mr. Ashok Dhall and Mr. Gautam Dhall (son of Mr. Ashok Dhall).

About us:

Established in 1993, CARE Ratings is one of the leading credit rating agencies in India. Registered under the Securities and Exchange Board of India, it has been acknowledged as an External Credit Assessment Institution by the RBI. With an equitable position in the Indian capital market, CARE Ratings provides a wide array of credit rating services that help corporates raise capital and enable investors to make informed decisions. With an established track record of rating companies over almost three decades, CARE Ratings follows a robust and transparent rating process that leverages its domain and analytical expertise, backed by the methodologies congruent with the international best practices. CARE Ratings has played a pivotal role in developing bank debt and capital market instruments, including commercial papers, corporate bonds and debentures, and structured credit.

Disclaimer:

The ratings issued by CARE Ratings are opinions on the likelihood of timely payment of the obligations under the rated instrument and are not recommendations to sanction, renew, disburse, or recall the concerned bank facilities or to buy, sell, or hold any security. These ratings do not convey suitability or price for the investor. The agency does not constitute an audit on the rated entity. CARE Ratings has based its ratings/outlook based on information obtained from reliable and credible sources. CARE Ratings does not, however, guarantee the accuracy, adequacy, or completeness of any information and is not responsible for any errors or omissions and the results obtained from the use of such information. Most entities whose bank facilities/instruments are rated by CARE Ratings have paid a credit rating fee, based on the amount and type of bank facilities/instruments. CARE Ratings or its subsidiaries/associates may also be involved with other commercial transactions with the entity. In case of partnership/proprietary concerns, the rating/outlook assigned by CARE Ratings is, inter-alia, based on the capital deployed by the partners/proprietors and the current financial strength of the firm. The ratings/outlook may change in case of withdrawal of capital, or the unsecured loans brought in by the partners/proprietors in addition to the financial performance and other relevant factors. CARE Ratings is not responsible for any errors and states that it has no financial liability whatsoever to the users of the ratings of CARE Ratings. The ratings of CARE Ratings do not factor in any rating-related trigger clauses as per the terms of the facilities/instruments, which may involve acceleration of payments in case of rating downgrades. However, if any such clauses are introduced and triggered, the ratings may see volatility and sharp downgrades.
