Short-term bank facilities	-	-	Withdrawn

Details of instruments/facilities in Annexure-1.

Rationale and key rating drivers

Reaffirmation of ratings assigned to bank facilities of HBL Engineering Limited (HBL) considers improved financial performance in 9MFY26 (Unaudited; FY refers to April 01 to March 31) with revenue growth of ~80% compared to corresponding quarter of previous fiscal and healthy profitability margins. This is primarily considering execution of supply of Kavach systems to Chittaranjan Locomotive works (CLW) post receipt of approval for version 4.0 (V 4.0) from Research Designs and Standards Organisation (RDSO), growth in revenue from exports and defence segments. For the Kavach systems order from CLW, HBL supplied systems 76% of the order book within the stipulated execution timeline, ending mid-December 2025. The balance order stands cancelled per order terms. In addition to the regular order book, new orders for installation of Kavach systems on locomotives and trackside upgradation provides revenue visibility for the medium-to-long term. The company is expected to maintain the positive momentum and improve its operational and financial performance in coming years backed by healthy demand for defence and industrial batteries segments. HBL's financial risk profile is expected to remain healthy, supported by its strong net worth position and strong liquidity position.

CARE Ratings Limited (CareEdge Ratings) notes that, though FY25 revenue was marginally lower-than-projected, due to softness in telecom segment and delay in RDSO approval, the company's profitability remained healthy due to better margins on industrial batteries (nickel-cadmium [Ni-Cad] and lead acid batteries) which find application in defence and industrial purpose and increased contribution from export revenue.

Ratings continue to derive strength from extensive experience of promoters and management in the industry, diversified product portfolio, which includes in-house developed technologies for most of its products, well-diversified revenue profile catering sectors, such as telecom, railways, data centres, defence and aviation and automotive, healthy financial risk profile with negligible reliance on external debt funding, investment in associate entities and favourable industry prospects. HBL continues to enjoy strong liquidity position marked by sizeable, unencumbered cash balances, and operational cash flow generation against low debt obligations.

However, ratings are constrained by exposure to volatile raw material prices, working capital intensive operations, elongated operating cycle, foreign exchange fluctuation risk, environmental risk, and intense competition in the industry.

CareEdge Ratings further considers expansion of existing facilities by setting up Lithium-ion battery division, infrastructure for electronic fuses, charging hubs, IT infrastructure alongside regular capex, which are expected to be funded through internal accruals.

CareEdge Ratings withdraws the rating assigned to project-specific working capital limits of HBL with immediate effect, as the company has surrendered these limits in full and there is no amount outstanding as on date.

Rating sensitivities: Factors likely to lead to rating actions

Positive factors

- Improved total operating income (TOI) over and above ₹2,800 crore and its profit before interest, lease rentals, depreciation, and taxation (PBILDT) margin of over 18% on a sustained basis, while maintaining a healthy financial risk profile.

¹Complete definition of ratings assigned are available at www.careratings.com and other CARE Ratings Limited's publications.

Negative factors

- Large debt-funded capex or acquisition impacting credit metrics, specifically debt to earnings before interest, taxation, depreciation, and amortisation (EBIDTA) exceeding 1x.
- Declining TOI and profitability on a sustained basis.

Analytical approach: Consolidated approach.

Consolidated financials of HBL and its subsidiaries have been considered owing to financial and operational linkages between parent and its subsidiaries. These entities are commonly referred to HBL in the analysis. Consolidated entities are listed under Annexure-6.

Outlook: Positive

CareEdge Ratings expects HBL to report healthy growth in its TOI, supported by favourable demand prospects for its diversified product portfolio and healthy order book. The company is also likely to sustain its operating margins in line with FY25, aided by its product mix and established market presence. With a prudent capital structure and comfortable liquidity position, HBL's financial risk profile is expected to remain healthy. However, the outlook may be revised to 'Stable' if revenue growth and profitability fall short of expectations, impacting the overall financial performance.

Detailed description of key rating drivers:**Key strengths****Improved financial performance in 9MFY26**

In 9MFY26, HBL reported TOI of ₹2698.71 crore (PY: ₹1491.63 crore), reflecting y-o-y growth of 80% considering increase order book position from railways. In line with TOI, PBILDT and profit after taxation (PAT) margins improved to 37.23% and 27.65%, respectively, supported by strong profitability from the railway segment (including Kavach order execution) and export markets. Decline in contribution telecom segment, was offset by higher-margin revenue from exports and railway businesses, underscoring effective portfolio diversification and margin management.

Improved order book position with repetitive orders from reputed clientele

As on December 31, 2025, HBL had an order book of ₹2,999 crore (against ₹4,479 crore as on July 31, 2025). Order book comprises major contracts for Train Collision Avoidance System (TCAS) equipment for locomotives and trackside upgradation projects, with execution timelines ranging from 12-24 months. In addition to that, in the current quarter, the company also secured fresh orders aggregating to ₹1,375 crore for supplying, testing, and commissioning onboard Kavach equipment. These orders are to be executed in the next 12 months providing healthy revenue visibility in the medium term. CareEdge Ratings expects timely execution of the existing and newly awarded orders to support robust revenue growth in the near term.

Stable financial performance in FY25

In FY25, HBL has lead acid and Ni-Cad batteries with capacity utilisation, which stood satisfactory at 54% and 90%, respectively, against 68% and 85%, respectively. On a consolidated level, HBL recorded marginal decline in revenue from ₹2,240 crore in FY24 to ₹1,978 crore in FY25 due to unforeseen delay in approval from RDSO towards CLW order and shift in market dynamics with telecom segment gradually moving to Lithium ion. However, it been offset by growth in Ni-Cad battery segment and HBL's diversified product profile offering to industries, enabling HBL to mitigate the risk to major extent, resulting in marginal decline, but profitability remained healthy. The company's PBILDT margin improved to 20.35% (PY: 19.19%), primarily driven by higher volumes and better sales realisation in the industrial battery segment, which enabled better cost absorption and operational efficiency. Exports grew by 40%, supported by the addition of new original equipment manufacturer (OEM) clients, contributing to enhanced profitability. In line with improved operating margin, net margin also improved to 13.98% against 12.52% supported by low finance cost.

Diversified revenue profile

HBL's revenue is distributed in segments of industrial batteries, defence and aviation batteries, electronics, and other products. Battery vertical remains a significant revenue generator for HBL, with electronics segment being the next major contributor. Although batteries continue to be the primary revenue source, HBL is actively working to reduce its reliance on the telecom sector. HBL has been strategically reducing reliance on the telecom segment, with its revenue share declined in FY25, while focusing on higher-margin products such as Ni-Cad and lithium-ion batteries, expanding exports to the Middle East, Asia Pacific (APAC), Africa, and Europe. Revenue visibility is further supported by multi-year orders from the railway sector, including Kavach systems, TCAS, Train Management System (TMS), and signalling works. In FY25, Electronics segment business declined by ~36% considering

shift in customer preference in telecom segment and hold of TCAS tenders from railways. In the coming years, from electronics segment driven by the rollout of more Vande Bharat trains implementation of Kavach systems, the company aims to diversify its revenue streams further.

Improved financial risk profile

The company's capital structure marked by debt-to-equity ratio and overall gearing ratio remaining below unity at 0.03x and 0.07x as on March 31, 2025, primarily considering healthy profits added to strong net worth and negligible debt at consolidated level. As on March 31, 2025, the company's adjusted net worth stood strong at ₹1,346.52 (PY: ₹1,089.56 crore). HBL's total debt consists of capex term loans and working capital limits. With low reliance on working capital limits and gradual repayment of term loans resulting in low debt levels. The company's other debt coverage indicators, including interest coverage ratio and total debt to gross cash accruals (TD/GCA) stood at comfortable levels.

In FY25, HBL availed working capital limits of ₹375 crore, overdraft (OD)/working capital demand loan (WC DL) limit of ₹350 crore and letter of credit (LC) of ₹25 crore to execute the specific order secured from railways and these specific order limits have been surrendered by end of December 2025. Regular capex and expansion of existing facilities will be funded through internal accruals generated from operations. Un-envisaged debt-funded capex availed in coming years, resulting in deterioration in financial risk profile is a key monitorable factor from credit perspective.

Investment in associate companies

As on March 31, 2025, the company's total investment in associate entities, Tonbo Imaging India Private Limited and Naval Systems and Technologies Private Limited, stood at ₹86.71 crore, with entities reporting net profits. While these associates continue to contribute positively to the HBL's overall portfolio, incremental strategic investments proposed to be funded through internal accruals and the company's ability to derive commensurate returns from such investments will remain key monitorable from a credit perspective.

Experienced promoters

HBL was promoted by Dr A J Prasad in 1986. Over time, Dr A J Prasad gained substantial experience in the company's business and has undertaken extensive research in battery and related segments. He has been associated with the industry for over three decades. He and Kavita Prasad (daughter) Director, and a team of experienced professionals, manage the company's day-to-day operations. HBL has been a well-known name in industrial batteries manufacturing industry. The company also has established a good presence in electronics segment and now has a diversified revenue base across multiple user industries. HBL caters requirement of core sectors, including telecom, railways, and defence. Battery vertical continues to be one of the major revenue spinners for the company followed by electronics.

HBL has consistently nurtured strong and positive relationships with its clients over the years. This has resulted in the company receiving repeat orders from its existing clientele. The company has been receiving repeat orders from reputed clientele, such as Bharat Sanchar Nigam Limited, Indian railways, and Indus Towers Limited among others. Order book comprises TCAS/TMS, Ni-Cad and sintered batteries, Silver Zinc, submarine and Lithium batteries, valve regulated lead acid batteries, railway signalling works, and defence electronics among others.

Key weaknesses

Working capital intensive business

HBL operates in a working capital intensive industry marked by elongated operating cycle. It procures raw materials majorly from the domestic market while some raw materials are imported. To maintain adequate raw material and given integrated operations, which involve multiple processes result in high inventory holding period. Backed by adequate cash generated from operating activities, the company's working capital cycle elongated to 147 days in FY25 against 114 days in FY24, primarily considering delay in approvals for Kavach resulted in higher inventory in the year end. Post-approval, the company started liquidating this inventory, driving growth in revenue as reflected in Q1FY26. The company has been efficiently managing working capital requirement through its generated cash flows, and hence, dependence on bank borrowings have been negligible.

Potential risk associated with lead-recycling operations

Lead is a substance recognised for its high toxicity and environmental impact, serves as the fundamental raw material in battery production. Enterprises involved in this industry are compelled to adhere to stringent pollution control regulations. As environmental regulations continue to become more stringent and environmental advocacy gains prominence, businesses

operating in this sector face inherent risks related to ecological considerations. Owing to HBL's extensive tenure within this industry, the company has consistently maintained compliance with all requisite standards.

Exposure to raw material price volatility

Raw material is the major cost to company, which contributes ~50 to 60% of TOI. Major raw materials required for manufacturing are on lead calcium and lead sub-oxide, which are volatile. Since lead comprises ~60% of battery costs, the company faces risk of price escalations due to market-driven and volatile raw material prices, which may potentially impact its profit margins.

Foreign exchange fluctuation risk

HBL imports some raw materials and exports products/services resulting exposure to foreign exchange risk. However, HBL, being a net exporter, the company's exposure is largely mitigated as foreign currency inflows are routed through Exchange Earners' Foreign Currency account (EEFC account), minimising exchange rate risks, which is reflected in the forex gains reported in FY25. In FY25, on a consolidated level, HBL gained on foreign exchange fluctuations amounting to ₹10.39 crore (against ₹6.32 crore in FY24).

Liquidity: Strong

The company's liquidity position is strong, supported by strong cash accruals of ₹322.71 crore in FY25 against a scheduled repayment obligation of ₹22.27 crore (including short term lease liabilities of ₹4.93 crore) for FY26. Free cash and bank balance available as on March 31, 2025, stood at ₹127.67 crore. Positive cash flows from operations, considering efficient working capital cycle resulted in low reliance on working capital limits. Average utilisation of fund-based working capital limits is negligible for 12 months ended December 2025. Its unutilised fund-based working capital lines provide sufficient cushion to meet short-term exigencies.

Assumptions/Covenants: Not applicable

Environment, social, and governance (ESG) risks**Environmental**

Lead manufacturing process is hazardous. HBL is committed to sustainability and environmental conservation. The company embraces a circular economy approach through implementation of a zero-liquid discharge systems, advanced waste recycling mechanisms, and the use of eco-friendly materials. HBL invested in solar power infrastructure and biomass-based energy solutions to reduce our dependence on fossil fuels. These initiatives have helped lower greenhouse gas emissions and improved energy efficiency across operations.

Social

Strict adherence to safety standards such as ISO 14001:2015 and ISO 45001:2011. Developed comprehensive OSHA system to ensure safety of all employees. Training on safety measures in induction to all employees, including specific training such as handling hazardous materials, confined space entry, refresher training, on-site emergency training to tackle urgent situations.

Governance

Corporate Environment, Social, and Governance (ESG) Committee oversees development and implementation of ESG strategies. It ensures that ESG practices align with industry standards and drive sustainable growth, integrating responsible practices across HBL operations.

About the company and industry

Industry classification

Macroeconomic indicator	Sector	Industry	Basic industry
Industrials	Capital goods	Electrical equipment	Other electrical equipment

Founded in 1986 by Dr A J Prasad, HBL is a publicly listed entity on Bombay Stock Exchange (BSE) and National Stock Exchange (NSE). HBL is engaged in manufacturing industrial batteries, electronics, and engineered products. HBL's products cater sectors, including telecom, UPS, defence, and railways in India. The company's presence spans continents, including North America, Europe, and Middle East, facilitated through its two subsidiaries - HBL America Inc. and HBL Germany GMBH. Other two active subsidiaries, Torquedrive Technologies Private Limited, is in manufacturing equipment and machinery, TTL Electric Fuel Private Limited, is in providing charging infrastructure for electric vehicles (EVs). Subsidiaries contribute less than 5% of total TOI at consolidated level.

About us:

Established in 1993, CareEdge Ratings is one of the leading credit rating agencies in India. Registered under the Securities and Exchange Board of India, it has been acknowledged as an External Credit Assessment Institution by the Reserve Bank of India. With an equitable position in the Indian capital market, CareEdge Ratings provides a wide array of credit rating services that help corporates raise capital and enable investors to make informed decisions. With an established track record of rating companies over almost three decades, CareEdge Ratings follows a robust and transparent rating process that leverages its domain and analytical expertise, backed by the methodologies congruent with the international best practices. CareEdge Ratings has played a pivotal role in developing bank debt and capital market instruments, including commercial papers, corporate bonds and debentures, and structured credit.
