Rationale and key rating drivers

CARE Ratings Limited (CareEdge Ratings) has been seeking information from Omnitech Engineering Limited (OEL) to monitor the rating(s) vide e-mail communications/ letters dated October 31, 2025, February 06, 2026, February 18, 2026, February 19, 2026, March 22, 2026, and numerous phone calls. However, despite our repeated requests, the company has not provided the requisite information for monitoring ratings. In line with the extant Securities and Exchange Board of India (SEBI) guidelines, CareEdge Ratings has reviewed the rating based on the best available information, which however, in CareEdge Ratings' opinion is not sufficient to arrive at a fair rating. **Ratings on OEL's bank facilities will now be denoted as CARE BBB-; Stable / CARE A3; ISSUER NOT COOPERATING*.**

Users of these ratings (including investors, lenders, and public at large) are hence requested to exercise caution while using above ratings.

Ratings have been revised on account of non-availability of requisite information to conduct the review of ratings. The ratings of OEL continue to derive strength from the promoters' vast experience in the precision components manufacturing industry, established operations supported by continuous addition of new machines, a reputed customer base, and a geographically diversified revenue profile. The ratings were also supported by strong profitability, which translated into moderate debt coverage indicators.

However, the ratings were constrained by OEL's growing albeit moderate scale of operations, leveraged capital structure, working capital-intensive operations marked by an elongated operating cycle, limited bargaining power against original equipment manufacturers (OEMs), and susceptibility of profit margins to volatility in raw material prices and foreign exchange rates.

Analytical approach: Standalone

Outlook: Stable

Stable outlook reflects CareEdge Ratings' expectations that the company will continue to benefit from its experienced promoters.

Detailed description of key rating drivers:

Key strengths

Vast experience of promoters with established track record of operations

Uday A. Parekh, Chief Executive Officer (CEO) and Director, has more than two decades of experience in the precision components manufacturing industry. He is well assisted by his brother-in-law Paras Parekh, and both handle the company's overall administration and day-to-day operations. Furthermore, the company has established operations with track record of more than one and a half decades in manufacturing of turned and machined parts such as cylinder liner, piston, gear box, shafts, and connecting rod among others, which are precision engineering products/parts. Its manufacturing facility and processes are accredited with various certifications, ISO 9001:2015 (Quality Management Systems), ISO 14001:2015 (Environmental Management Systems), ISO 45001:2018: (Occupational health & safety management systems), and IATF 16949 (International standards for Automotive quality management systems). Also, OEL has Star House Export certification.

¹Complete definition of ratings assigned are available at www.careratings.com and other CARE Ratings Limited's publications.

Reputed customer base and geographically diversified revenue profile

OEL is primarily engaged in exports of precision components and 80% of its total operating income (TOI) came from exports in FY25. The company's exports were majorly to USA and Europe. The company primarily caters directly to the requirements of the original equipment manufacturers (OEMs). Its customer base is reputed due to specialised products with high degree of quality and precision, various accreditations in place and hence commands healthy profitability. OEL caters to the requirement of diverse industry segments, including earth-moving equipment, airport and ground equipment, oil & gas, power, and other engineering industries.

Healthy profitability

The company is essentially engaged in manufacturing precision components for various critical industries, and hence, commands healthy profitability. Additionally, the company caters to reputed customers in the US and Europe, resulting in better sales realisation. The company's PBILDT margin remained healthy at 34.43% in FY25 [35.88% in FY24]. The PBILDT margin continued to remain healthy at ~32% in 9MFY26.

Moderate debt coverage indicators despite leveraged capital structure

OEL's capital structure remained leveraged as on FY25 end with overall gearing ratio of 1.72x (PY: 2.41x) as on March 31, 2025. Moderation in overall gearing was due to significant increase in term debt availed for large size debt funded expansion capex and high utilisation of working capital limits. Owing to healthy profitability, company's debt coverage indicators continued to remain moderate marked by PBILDT interest coverage of 4.13 times (PY:5.01x) and total debt/ GCA of 4.50x (P.Y.: 4.48x) in FY25.

Key weaknesses**Growing albeit moderate scale of operations**

During FY25, OEL's TOI increased significantly to Rs. 351.04 crores (PY: Rs. 190.69 crores). In 9MFY26, OEL further reported TOI of Rs.372.09 crores. Growth in scale of operations from FY25 onwards was facilitated by commercialisation of its Unit-II at "Chapra".

Working capital intensive operations with elongation of operating cycle

The company is engaged in the manufacturing precision components of various sizes, types and specifications catering to diversified industry segments and has setup a warehouse in the US to decrease lead time to its customers. Also, the company needs to maintain raw material inventory in order to complete the orders in timely manner. Considering multiple products, transit time of 60-90 days and execution period leads to high inventory days. The company provides clean credit to its customers for around 60-90 days. Against this, it gets similar credit period from its suppliers. High inventory period predominantly results in an elongated working capital cycle for the company. During FY25, operating cycle elongated significantly from 229 days in FY24 to 268 days in FY25, driven mainly by higher inventory holding days.

Limited bargaining power against OEMs

OEL caters to reputed companies in the US and Europe, including Fortune 500 companies. Considering its size, it has limited bargaining power against OEMs. OEL has to maintain a large portfolio of product offerings and continuously evolve itself per the client requirement to remain competitive in business, as it competes with large, organised players for export orders.

Profit margins susceptible to volatility in raw material prices and forex rates

The company's key raw material consists of bar-stocks made of steel and alloys whose prices are volatile. Also, the orders are received monthly and quarterly, which are of fixed prices, exposing its profitability to volatility associated with raw material prices. However, as articulated by the management, OEL has price variation clause, with all its customers limiting its risk to volatility in raw material prices. Furthermore, the company derives most of its revenue from export market as against limited imports, and the company manages its foreign exchange risk by using packing credit loan in foreign currency (PCFC) limit as well as entering forward contracts. The sales contract also has implicit forex hedging terms.

About the company and industry

Industry classification

Macroeconomic indicator	Sector	Industry	Basic industry
Industrials	Capital Goods	Industrial Products	Other Industrial Products

OEL, formerly Omnitech Engineering, was initially promoted by Mr. Uday A. Parekh and Mrs. Kinneriben U. Parekh as a partnership firm and started its operations in 2006. Subsequently, it was converted into a private limited company in August 2021 and further it got converted into a public limited company in October 2024. The company is engaged in manufacturing of turned and machined parts which are precision engineering products catering to various industries such as oil & gas, power, agriculture and earth moving equipment, hydraulics, airport ground support equipment and automation & valve. These are customized products/parts which are manufactured as per customer specifications from stainless steel and alloy bars, forging and casting products. It has presence in India as well as export market (around 15 countries). Further, Omnitech Engineering Limited completed its IPO of ₹583 crore and was listed on March 5, 2026, on BSE and NSE.
