Total Instruments	500.00 (Rs. Five Hundred Crore Only)		

Details of instruments/facilities in Annexure-1

Detailed Rationale & Key Rating Drivers

The ratings assigned to the proposed Non-convertible Debenture issue of Balkrishna Industries Limited (BIL) factor in the established market position of the company in the Global 'Off Highway Tyre' (OHT) market, being the largest Indian company to export OHT tyres, diversified product portfolio catering to agricultural and industrial segments, sales to both Original Equipment Manufacturers (OEMs) and replacement market and geographically diversified product portfolio catering to over 160 countries. The ratings also factor in the extensive track record of the promoters of operating in the OHT segment, robust financial risk profile characterized by strong debt coverage indicators, strong operating margins aided by backward integration of carbon black and strong liquidity position.

The overall gearing of the company stood at 0.17x as on March 31st 2021 (PY: 0.19x) and the interest cover stood at over 157x in FY21 (PY: 130x). The debt coverage indicators are likely to remain strong going forward as well despite capex of Rs.1,900 crore planned over the next 2 years as the same is expected to be funded through internal accruals. The company reported ~18% increase in Total Operating Income (TOI) in FY21 aided by 12.6% volume growth and reported operating margin of 31.8% in FY21 due to positive operating leverage. The ratings also factor in the upside of recovery in the economic activities globally which is expected to translate into higher revenues for the company.

The rating strengths are constrained by competitive intensity in the global OHT market, exposure to currency risk, exposure to volatility in the raw material prices and susceptibility to changes in government regulations of importing countries. The company also remains exposed to project risk; although this risk is mitigated to an extent due to successful completion of capex programmes in the past. The company also remains exposed to the vagaries of economic downturns.

Rating Sensitivities

Positive Factors

- Improvement in Total Debt/PBILDT to 0.30x on a sustained basis
- Improvement in operating ROCE to 25% on a sustained basis

Negative Factors

- Delay in implementation of capex programme within the specified timelines.
- Deterioration in Total Debt/PBILDT to 1.25x on a sustained basis

Detailed description of the key rating drivers

Key Rating Strengths

Diversified revenue profile and geographical presence

The company has diversified revenue profile and caters to agricultural as well as industrial segments (which includes tyres for mining and construction activities etc). In FY21, nearly 64% of revenue was derived from the agricultural segment (66% in Q1FY22) and 32% of revenue was derived from industrial segment (31% in Q1FY22). The company has presence in both the OEM and replacement segments. Replacement segment generally offers higher margins. In FY21, nearly 70% of the revenue was derived from the replacement segment (72% in Q1FY22). The company also has well diversified geographical presence with nearly 50% of the revenue coming from Europe. The company caters to over 160 countries worldwide with over 2,700 SKUs. The diversification across categories and geographical areas insulates the company to an extent from the vagaries of economic cycles and political scenario.

Improvement in Total Operating Income (TOI) and strong operating margins aided by backward integration of carbon black

In FY21, the company reported improvement in the Total Operating Income by 18% aided by 12.6% volume growth over FY20 and price hikes taken in Q4FY21 in response to commodity inflation. Although at present the company has ~5-6% market share

¹Complete definitions of the ratings assigned are available at www.careratings.com and in other CARE publications.

in the global specialty market, the market share is expected to increase to ~10% over the next 4-5 years through capacity expansion and greater penetration especially in North America.

The company has robust operating margins due to backward integration of carbon black. Backward integration of carbon black not only helps in reducing the input cost but also transportation cost. Going forward, the operating margins are expected to be maintained in the range of 28-30%.

Comfortable capital structure and debt coverage indicators

The capital structure of the company is comfortable with robust debt coverage indicators as evinced by overall gearing of 0.17x as on March 31st 2021 (PY: 0.19x). The capex requirements of the company are generally met through internal accruals without reliance on external debt. Thus, the debt coverage indicators are expected to remain strong going forward as well despite upcoming capex. The interest cover indicator was also comfortable at over 157x in FY21 (238x in Q1FY22).

Key Rating Weaknesses

Susceptibility to volatility in the raw material prices and currency risk

The principal raw materials for BIL are natural rubber and synthetic rubber, carbon black and other chemicals. Prices of key raw material account for ~60% of its aggregate production costs. The rubber prices have elevated in the past six months or so and moderated to an extent in Q2FY22. Although price increases are taken from time to time, the operating margins continue to remain susceptible to variation in raw material prices. BIL has backward integration for its carbon black and nearly 80-85% of its carbon black requirements are met through in-house production.

Further, as most of the raw materials and capital equipment are imported, the company is exposed to foreign currency risk; albeit, it enjoys natural hedge as most of its revenues are also in foreign currency.

Exposure to project risk

The company has planned capex of Rs.1,900 crore over FY22 and FY23 towards capacity expansion and modernization. The company would be undertaking tyre capacity expansion by 50,000 MTPA at Bhuj expected to be completed by H2FY23. Further, it would also be undertaking expansion in the carbon black facility and setting up of additional power plant which would be completed by H1FY23. Further, it would also be undertaking modernization, automation and technology upgradation at existing facilities which is expected to increase the efficiency and productivity of existing facilities. The company has adequate internal accruals to fund the capex, however it continues to remain exposed to project risk.

Exposed to government regulations of importing countries

The US Department of Commerce had imposed counter-vailing duties on some of the Indian tyre manufacturers who exported OHT to US in March 2017. For BIL, the rate of duty is 5.36%. This is not likely to have material impact on the overall revenue, as the company has well diversified geographical presence with less revenue exposure to North America. Further, India being a low cost manufacturing hub, the exported tyres continue to be cost effective. Nevertheless, BIL continues to remain exposed to the impact of government regulations of importing countries.

Liquidity: Strong

The liquidity position of the company is strong as evinced by cash and cash equivalents of Rs.447 crore as on March 31, 2021. The current as well as non-current investments stood at Rs.1,557 crore as on June 30, 2021. The unutilized working capital limits stood at Rs.490 crore as on August 31, 2021. The company is expected to earn healthy cash flows in FY22. As against the same, the company has negligible repayment obligations in FY22.

Analytical approach: Consolidated

CARE has considered consolidated financials of BIL and its subsidiaries as the subsidiaries are in the same line of business and have operational synergies. The list of subsidiaries consolidated is presented in Annexure 6 below.

About CARE Ratings:

CARE Ratings commenced operations in April 1993 and over two decades, it has established itself as one of the leading credit rating agencies in India. CARE is registered with the Securities and Exchange Board of India (SEBI) and also recognized as an External Credit Assessment Institution (ECAI) by the Reserve Bank of India (RBI). CARE Ratings is proud of its rightful place in the Indian capital market built around investor confidence. CARE Ratings provides the entire spectrum of credit rating that helps the corporates to raise capital for their various requirements and assists the investors to form an informed investment decision based on the credit risk and their own risk-return expectations. Our rating and grading service offerings leverage our domain and analytical expertise backed by the methodologies congruent with the international best practices.

Disclaimer

CARE's ratings are opinions on the likelihood of timely payment of the obligations under the rated instrument and are not recommendations to sanction, renew, disburse or recall the concerned bank facilities or to buy, sell or hold any security. CARE's ratings do not convey suitability or price for the investor. CARE's ratings do not constitute an audit on the rated entity. CARE has based its ratings/outlooks on information obtained from sources believed by it to be accurate and reliable. CARE does not, however, guarantee the accuracy, adequacy or completeness of any information and is not responsible for any errors or omissions or for the results obtained from the use of such information. Most entities whose bank facilities/instruments are rated by CARE have paid a credit rating fee, based on the amount and type of bank facilities/instruments. CARE or its subsidiaries/associates may also have other commercial transactions with the entity. In case of partnership/proprietary concerns, the rating /outlook assigned by CARE is, inter-alia, based on the capital deployed by the partners/proprietor and the financial strength of the firm at present. The rating/outlook may undergo change in case of withdrawal of capital or the unsecured loans brought in by the partners/proprietor in addition to the financial performance and other relevant factors. CARE is not responsible for any errors and states that it has no financial liability whatsoever to the users of CARE's rating. Our ratings do not factor in any rating related trigger clauses as per the terms of the facility/instrument, which may involve acceleration of payments in case of rating downgrades. However, if any such clauses are introduced and if triggered, the ratings may see volatility and sharp downgrades.
