Rating Rationale

The ratings assigned to the bank facilities of Dee Development Engineers Limited (DDEL) continue to factor in the effect of equity infusion made by the Carlyle group in August 2015 leading to improvement in liquidity position as reflected by reduction in its working capital borrowing utilisation and improved current ratio as on March 31, 2016. While the capital structure of the company was moderately leveraged as on March 31, 2015 due to high working capital borrowings, with this equity infusion, the liquidity position and solvency profile of the company has improved substantially as on March 31, 2016. The ratings also continue to derive strength from the experienced promoters, long track-record of operations, established relationships with reputed clientele and moderate debt coverage indicators. However, the ratings are constrained by the moderate order book position, working capital intensive operations of the company characterized by elongated operating cycle and proposed capital expenditure towards a manufacturing facility in Thailand.

Going forward, the ability of the company to improve profitability margins, efficiently execute its order book, build large orders by leveraging on its diversified presence across geographies in the Power and Oil & Gas segments as well as benefiting from the global relationships of its equity partner would determine the company's growth prospects and remains a key rating sensitivity. Furthermore, successful execution of the company's expansion project in Thailand while maintaining the liquidity and capital structure of the company within envisaged levels shall also be a key rating sensitivity.
