Details of instruments/facilities in Annexure-1

Detailed Rationale & Key Rating Drivers

The reaffirmation of rating of the non-convertible debentures (NCDs) of J.K. Cement Limited (JKCL) derives strength from the extensive experience of the promoters in cement business, the company's established presence in grey cement across diversified geographical markets and its dominant position in white cement, ensuring healthy margins from the product, and its strong brand image in both segments. The rating also takes into account satisfactory financial performance of the company during the FY20, its comfortable financial profile and its strong liquidity position.

The rating is, however, constrained on account of the timing of the significant capacity expansion which is nearing completion and would come on-stream at a time when the cement industry is impacted on account of the outbreak of Covid-19 pandemic, the incremental debt required for the residual portion of the expansion programme which shall lead to increased overall gearing in the next 1-2 years, support extended by JKCL to its loss-making subsidiary J.K. Cement Works Fujairah (JKCWF, rated CARE AA (SO); Stable), cyclical nature associated with the cement industry, exposure to volatility in input costs and cement demand dependent on construction activity and infrastructure spend in the economy and the uncertainty regarding the timing of the on-going Covid-19 pandemic clearing out.

Rating Sensitivities: The sensitivities indicate the possible direction of movement of rating in future (positive or negative), on happening of, *inter alia*, the following events:

Positive Factors:

- Improvement in leverage levels, going forward, with overall gearing sustaining below unity, on a consolidated basis.
- Timely stabilization of enhanced capacities such that the overall capacity utilization levels ramp up to 75% -80%
- Sustained growth in top-line by around 15-20% p.a.
- Turnaround of loss-making subsidiary J.K. Cement Works Fujairah
- Sustained profitability in light of volatile input costs

Negative Factors

- Time and cost overruns in the ongoing capex and extended stabilization period for the enhanced capacities amidst the ongoing Covid-19 pandemic
- Increase in leverage levels such that overall gearing, on a consolidated basis, increases beyond 1.50x
- Structural changes in the white cement industry impacting the profitability of the company

Detailed description of the key rating drivers

Key Rating Strengths

Experienced promoters, established presence and strong brand image

The promoters of JKCL have extensive experience in the business of cement manufacturing and marketing. JKCL also has an experienced and qualified management team, which has facilitated the company's growth over two decades. The company has a strong presence in the grey cement segment across the northern, western and southern markets of India, with presence in more than 10 states and has established brands like 'JK Super Cement' and 'JK Super Strong Cement'. Besides, the company has a pan-India presence in white cement and wall putty, which are sold, respectively, under brand names, 'JK White Cement' and 'JK Wall Putty'.

¹Complete definition of the ratings assigned are available at www.careratings.com and other CARE publications

Dominant position in white cement industry

JKCL is the second largest white cement manufacturer in India with an installed capacity of 0.6 million tonnes per annum (MTPA). The company also produces wall putty, a value-added product of white cement, for which it has an overall capacity of 0.9 MTPA as on March 31, 2020. The white cement segment is characterised by a small industry with significant entry barriers, and consequently a duopoly structure as of now, which ensures healthy operating margins for the manufacturers. Besides, consistently strong growth in the white cement and wall putty segments has created a steady cash flow stream for JKCL and contributed significantly towards its PBILDT over the years.

Consistent improvement in operating and financial performance

During FY20, the company has reported improvement in financial performance. The consolidated operating income of JKCL has grown by around 11% on y-o-y basis to Rs.5,887 crore (Rs.5310 crore in FY19), its PBILDT has increased by around 46% to Rs.1299 crore in FY20 (Rs.890 crore in FY19), and its PAT has increased by 83% to Rs.483 crore in FY20 (Rs.264 crore in FY19). The improvement in performance in FY20 is primarily on account of higher sales realizations and reduced input costs.

JKCL's volume growth in the white cement and wall putty segments continued to be steady at 10% in FY20. The volumes in the grey cement segment declined by 2% during FY20 owing to Covid-19 pandemic, which affected the operations of the company during last 10 days of March 2020. While net sales realization for white cement and putty remained at similar level during FY20 over FY19, the net sales realization in grey cement segment improved by more than 13% during FY20, which has offset the decline in volumes during the FY20.

Owing to nation-wide lockdown, the volumes are expected to be lower in Q1 FY21. It may however, be noted that the company has gradually ramped up its operations on all the plants following partial lifting of the lockdown. The ramp up in rural areas has been moderate which has resulted in increased trade volumes for grey cement subsequent to lifting of lockdown. The sales volume of white cement, however, has declined, with white cement being a high value commodity with demand primarily in urban areas. Cement demand is closely linked to the overall economic growth, particularly the housing and infrastructure sector, which has fallen given the lockdown related restrictions owing to Covid-19 pandemic. Going forward, the ability of the company to sustain or improve its operational performance amidst the ongoing Covid-19 pandemic, and revive its volumes and realizations over the rest of the FY21 shall be a key monitorable.

Comfortable financial risk profile and strong liquidity position

JKCL's financial risk profile improved during the FY19 facilitated by improvements in the capital structure and debt service coverage ratios. The company raised equity aggregating Rs. 510.79 crore in the month of Dec 2018 which has strengthened the company's capital structure. The company's interest coverage ratio stood at 3.41x for FY19, which further improved to 4.70x for FY20 on account of improvement in PBILDT levels. Furthermore, the overall gearing of the company also improved to 1.10x as on March 31, 2020 at the back of healthy profits generation as against 1.12x as on March 31, 2019, however, drawdown of debt for the ongoing capex would result in some increase in gearing levels in the next year.

Key Rating Weaknesses***Ongoing capital expenditure though satisfactory progress achieved***

JKCL had undertaken a brownfield expansion of 4.2 MTPA for a total estimated expenditure of about Rs.1,998 crore, which had started in FY18. The expansion comprises of an additional clinker capacity of about 2.64 MTPA at Mangrol and additional grinding capacity of 1 MTPA each at Nimbahera and Mangrol. Besides, two new split grinding units of 1.5 MTPA at Aligarh, Uttar Pradesh and 0.7 MTPA at Balsinor, Gujarat would be added under the planned expansion. The aggregate project cost is funded in debt equity ratio of 1.86:1. The entire debt has been tied up and drawn to the extent of Rs. 760 crore as on March 31, 2020. Equity has been infused aggregating Rs. 668 crore as on March 31, 2020 as against the total equity requirement of Rs. 698 crore. The company has incurred expenses of Rs.1,480 crore till March 31, 2020.

While the company had commissioned the 1 MTPA grey cement grinding unit at Nimbahera and a 2.64 MTPA grey clinker at Mangrol in September 2019, 1 MTPA Cement Grinding Capacity at Mangrol and 1.5 MTPA at Aligarh has also been commissioned and commercial despatches have since started from February 2020. The balance 0.7 MTPA grinding unit at Balasinor is at an advanced stage and likely to be commissioned by FY21.

While a large part of the capex has been completed, the company remains exposed to project risk for the residual portion of the expansion project, which would be substantially funded through term debt, resulting in increased gearing ratio during the FY21. The timely completion and stabilization of operations of the new capacity shall be a key monitorable.

Furthermore, the capacities would come on-stream at a time when the cement industry is impacted on account of the outbreak of Covid-19 pandemic and the entire industry would grapple with volume ramp-up with normalization of the ongoing scenario. However, this is mitigated to a large extent by the strong brand image enjoyed by the company. Besides, the company expects to enhance its distribution network during the current period which would enable it to increase its supply as and when the demand normalizes.

JKCWF's weak operating performance and financial risk profile

JKCL, under its step-down subsidiary JKCWF, had established a green-field dual process cement plant in September 2014 at Fujairah, UAE, having installed capacity of 0.6 MTPA of white cement or 1 MTPA of grey cement. JKCWF has reported net loss since the commencement of operations (net loss of Arab Emirate Dirhams (AED) 38.15 million and AED 37.23 million in CY 19 and CY18 respectively). The operating levels have remained relatively low due to weak demand in the Gulf countries on account of subdued construction activity. JKCWF remains dependent on infusion of funds from JKCL for meeting its debt obligations in near term. Consequently, operational and financial improvement in performance would remain a crucial rating sensitivity of JKCL.

Exposure to volatility in input costs as well as sales realization prices

While JKCL has fuel supply agreements (FSA) to meet part of the coal requirement, it has a significant dependence on petroleum coke (sourced from domestic markets) and imported coal, thereby exposing the company to any adverse volatility in the prices of commodities. Additionally, the company is meeting part of its fuel requirement through imports, which also exposes it to the risk of any adverse fluctuation in exchange rates. The ability of the company to manage costs and improve realizations remains crucial. Besides, realizations and profitability get impacted by demand, supply, offtake etc., which are inherent risks associated with the cement industry.

Liquidity Position: Strong

The liquidity position of the company continues to be strong with free cash balance (including liquid investments) of around Rs.980 crore as on July 1, 2020. The average utilisation of fund-based working capital limits (including commercial paper) was comfortable at 31.95% for 12 months ending May 31, 2020. The company has principal repayments of around Rs.415 crore in FY21 on a consolidated basis vis-à-vis gross cash accruals of Rs.851 crore in FY20.

The company has not availed moratorium for its debt obligations under the COVID-19 - Regulatory Package announced by the RBI on March 27, 2020 and May 22, 2020.

CARE Ratings commenced operations in April 1993 and over two decades, it has established itself as one of the leading credit rating agencies in India. CARE is registered with the Securities and Exchange Board of India (SEBI) and also recognized as an External Credit Assessment Institution (ECAI) by the Reserve Bank of India (RBI). CARE Ratings is proud of its rightful place in the Indian capital market built around investor confidence. CARE Ratings provides the entire spectrum of credit rating that helps the corporates to raise capital for their various requirements and assists the investors to form an informed investment decision based on the credit risk and their own risk-return expectations. Our rating and grading service offerings leverage our domain and analytical expertise backed by the methodologies congruent with the international best practices.

Disclaimer

CARE's ratings are opinions on the likelihood of timely payment of the obligations under the rated instrument and are not recommendations to sanction, renew, disburse or recall the concerned bank facilities or to buy, sell or hold any security. CARE's ratings do not convey suitability or price for the investor. CARE's ratings do not constitute an audit on the rated entity. CARE has based its ratings/outlooks on information obtained from sources believed by it to be accurate and reliable. CARE does not, however, guarantee the accuracy, adequacy or completeness of any information and is not responsible for any errors or omissions or for the results obtained from the use of such information. Most entities whose bank facilities/instruments are rated by CARE have paid a credit rating fee, based on the amount and type of bank facilities/instruments. CARE or its subsidiaries/associates may also have other commercial transactions with the entity. In case of partnership/proprietary concerns, the rating /outlook assigned by CARE is, inter-alia, based on the capital deployed by the partners/proprietor and the financial strength of the firm at present. The rating/outlook may undergo change in case of withdrawal of capital or the unsecured loans brought in by the partners/proprietor in addition to the financial performance and other relevant factors. CARE is not responsible for any errors and states that it has no financial liability whatsoever to the users of CARE's rating.

Our ratings do not factor in any rating related trigger clauses as per the terms of the facility/instrument, which may involve acceleration of payments in case of rating downgrades. However, if any such clauses are introduced and if triggered, the ratings may see volatility and sharp downgrades.
