Details of instruments/facilities in Annexure-1

Detailed Rationale & Key Rating Drivers

The reaffirmation of the ratings of bank facilities & instruments of JSW Energy Limited (JEL) continues to derive strength from well established and highly experienced promoter group having rich experience power industry, long-term firm offtake arrangement of major operational capacity providing favourable medium to long-term revenue visibility, favourable debt coverage indicators and financial risk profile.

However, the rating strengths continue to be partially offset by volatility associated with fuel cost & foreign exchange rate and counter party risk.

Ability of JEL to maintain envisaged operational parameters amidst tepid domestic power sector and any major capital expenditure/large debt funded acquisition impacting overall financial risk profile of the company remains key rating sensitivities.

Detailed description of the key rating drivers

Key Rating Strengths

Well established and highly experienced promoter group having rich experience power industry

Incorporated in 1994, JEL is the holding company for JSW group's power business. As of March 31, 2019 JSW group's consolidated operational capacity stood at 4.45 GW. In addition, JEL has set up (through a subsidiary) 165 km transmission line for transmission of power generated at Ratnagiri region and is engaged in power trading through its subsidiary.

JEL has qualified, professional and experienced management team with significant experience in the power sector. The company also provides operation & maintenance services for power plants of the group companies and project management services for the power plants being set up by the group. JEL has successfully set up and is operating 860 MW thermal power plant at Vijaynagar, Karnataka, and a 1,200MW imported coal based plant at Ratnagiri, Maharashtra. The company, through a subsidiary owns and operates a 1,080 MW lignite based power plant in Barmer, Rajasthan. JEL has presence in renewable segment through operations of hydro project in Himachal Pradesh of capacity of 1,300 MW and 10 MW solar capacities across various locations.

In addition, the intra-state power transmission project, a 74:26 joint venture with MSETCL (through a subsidiary, Jaigad Power Transco Ltd. The project consists of 400 kV double circuit Jaigad – New Koyna (55 km) and Jaigad – Karad (110 km) lines for transmission of power generated at Ratnagiri plant (Maharashtra).

The company is also into mining business through its associate Barmer Lignite Mining Co. Ltd, (a 49:51 joint venture between JSW Energy (Barmer) Limited (JEBL) and Rajasthan State Mines and Minerals Ltd (RSMML)), commenced lignite mining from Kapurdi and Jalipa blocks in Rajasthan. BLMCL is a captive mine company for providing fuel to JEBL power plant at Barmer.

Long-term firm offtake arrangement of major operational capacity providing favourable medium to long-term revenue visibility

JEL has historically operated its power plants and sold power through a combination of long/medium-term PPAs as well as on merchant basis. As on June 24, 2019, JEL had long term PPAs for about 81% capacity while the balance is being sold on short term/merchant basis.

The presence of a combination of long-term and short-term off-take arrangements provides JEL with some revenue visibility as well as opportunity to benefit from merchant tariffs, as and when they are attractive.

¹ Complete definition of the ratings assigned are available at www.careratings.com and other CARE publications

During FY19 the company witnessed improvement in LT PPA mix to 80.4% (3,578.50 MW) as compared to 75.0% (3,328 MW) in FY18. The addition of 250 MW was PPAs being tied up with companies of JSW Group for Ratnagiri and Vijayanagar plant. The O&M expenses of the company reduced to Rs. 18.70 lakh/MW in FY19 from Rs. 19.30 lakh/MW in FY18 due to adoption of re-engineering processes, optimization of work contracts and implementing best industry practices for equipment maintenance across plant locations resulting in lower store & spare consumptions.

Plant Load Factor (PLF) of Vijayanagar plant dipped in FY19 vis-à-vis FY18 due to lower short term power sales. Short term sales units dipped from 5,019 MUs in FY18 to 3,141 MUs in FY19 primarily on account of increase in long term PPA proportion to 100% at Karcham Wangtoo plant. However, the Ratnagiri plant exhibited improvement in PLF in FY19 vis-à-vis due to higher off-take from LT and ST customers.

Going forward ability of the company to maintain envisaged operational parameters amidst tepid domestic power sector remains key rating sensitivity.

Favourable debt coverage indicators and financial risk profile

Overall gearing ratio improved from 1.23 times as on March 31, 2018 to 0.78 times as on March 31, 2019 on account of reduction of debt. Total Debt to GCA of the company improved from 10.97 times in FY18 to 4.91 times in FY19 on account of higher gross cash accruals. During FY19 the company benefitted from increase in merchant tariffs in few months. Interest coverage ratio of the company improved to 2.73 times in FY19 as compared to 2.14 times in FY18 on account of lower interest & finance charges.

JEL expects to revive its Kutehr hydro project of capacity of 240 MW. The company has incurred around Rs. 280 crore as on date on the project. The company is in talks with Discoms for power off-take from project; post finalisation of it the project work will restart.

Going forward any major capital expenditure/large debt funded capital acquisition impacting overall financial risk profile of the company remains key rating sensitivity.

Key Rating Weaknesses

Volatility associated with fuel cost and foreign exchange rate

JEL's power plant operations depend on imported coal (mainly from Indonesia and South Africa) for its Vijayanagar & Ratnagiri plants. Since most of the fuel procurement is linked to spot prices the profitability of the company is exposed to the volatility in international coal prices to the extent of open capacity. JEL varies the mix of Indonesian and South African coal to optimize the fuel cost.

Volatility in foreign currency affects the profitability of the company to the extent of open capacity. In order to reduce the impact of rising imported coal prices, the company has secured approval from Ministry of Environment and Forests to blend domestic coal with imported coal upto 50% at Vijayanagar & Ratnagiri.

Counter party risk

JEL through its subsidiaries/associates has power off-take arrangement on long-term and short-term basis with Discoms in Rajasthan, Maharashtra, Himachal Pradesh, Punjab, Haryana, Uttar Pradesh and JSW group companies. As a result the company's revenue visibility is exposed to the vagaries of financial risk profile of these entities. The receivables value at consolidated level increased from Rs. 1,151.22 crore as on March 31, 2018 to Rs. 1,427.75 crore as on March 31, 2019 on account of delay in receipts from Rajasthan Discoms. The receivables from these Discoms are generally received within stipulated time period. However, in case of any delay the company receives delayed payment charges.

Industry outlook

The all-India energy demand had witnessed a growth of 6.2% in FY18 to 1,213.33 BUs. The demand growth had improved as compared to previous years when it stood at 2.56% and 4.2% in FY17 and FY16 respectively. The overall power requirement was largely met by conventional power generation, which grew by 3.98% in FY18 (PY: 4.72%). Overall the demand supply gap stood marginal and stood at 0.7% (PY:0.7%) and 2.1% (PY:1.6%) for base and peak deficit respectively. Further during H1FY19 the base energy deficit contracted by 10 bps to 0.6% aided by 6.0% growth in power supply to 658 BU. The thermal power supply however increased by only 4.0% on YoY basis to 529.4 BU in H1FY19 primarily attributable to lower coal availability. Higher seasonal power demand coupled with lower coal availability has led to firmness in spot prices. There has been spurt in the short-term / spot prices, with average clearing price at IEX increasing from Rs. 2.72/ unit in trailing 12 months ended Sep'17 to Rs. 3.74/ unit in trailing 12 months ended Sep'18.

The outlook on thermal power is negative to stable. Subdued power demand, lack of visibility on long term PPAs, less access to coal at reasonable prices and weak discoms shall continue to weigh on the credit profile of generation companies in the near to medium term. Long term prospects of the thermal segment would be driven by improvement in the power demand, availability of long term PPAs and improvement in discoms financial and operational performance.

Liquidity: Superior

JEL at consolidated level has free cash and cash equivalent of Rs. 504.55 crore coupled with unutilized fund based working capital limits of Rs. 1,311 crore provides a liquidity support to a large extent. With gearing of 0.78 times as on March 31, 2019, JEL has sufficient gearing headroom to raise additional debt for its capex. Average collection days of the company

improved from 76 days as on March 31, 2018 to 51 days as on March 31, 2019. Further, the operating cycle of the company continues to be negative as on March 31, 2019.

Analytical approach: Consolidated

About CARE Ratings:

CARE Ratings commenced operations in April 1993 and over two decades, it has established itself as one of the leading credit rating agencies in India. CARE is registered with the Securities and Exchange Board of India (SEBI) and also recognized as an External Credit Assessment Institution (ECAI) by the Reserve Bank of India (RBI). CARE Ratings is proud of its rightful place in the Indian capital market built around investor confidence. CARE Ratings provides the entire spectrum of credit rating that helps the corporates to raise capital for their various requirements and assists the investors to form an informed investment decision based on the credit risk and their own risk-return expectations. Our rating and grading service offerings leverage our domain and analytical expertise backed by the methodologies congruent with the international best practices.

Disclaimer

CARE's ratings are opinions on credit quality and are not recommendations to sanction, renew, disburse or recall the concerned bank facilities or to buy, sell or hold any security. CARE has based its ratings/outlooks on information obtained from sources believed by it to be accurate and reliable. CARE does not, however, guarantee the accuracy, adequacy or completeness of any information and is not responsible for any errors or omissions or for the results obtained from the use of such information. Most entities whose bank facilities/instruments are rated by CARE have paid a credit rating fee, based on the amount and type of bank facilities/instruments.

In case of partnership/proprietary concerns, the rating /outlook assigned by CARE is based on the capital deployed by the partners/proprietor and the financial strength of the firm at present. The rating/outlook may undergo change in case of withdrawal of capital or the unsecured loans brought in by the partners/proprietor in addition to the financial performance and other relevant factors.
