Details of facilities in Annexure-1

Detailed Rationale & Key Rating Drivers

CARE has reaffirmed the ratings assigned to the bank facilities of Srikalahasthi Pipes Ltd (SPL) at 'CARE A+; Stable /CARE A1+ (Single A Plus; Outlook: Stable/A One Plus)' Issuer not cooperating and has simultaneously withdrawn the ratings with immediate effect.

The rating withdrawal is at the request of SPL and 'No Objection Certificate' received from the banks that have extended the facilities rated by CARE.

SPL has not provided information for monitoring of the rating and continues to be non-cooperative despite requests for submission of information including through e-mail dated August 28, 2020. In line with the extant SEBI guidelines, CARE has reviewed the ratings on the basis of the best available information which however, in CARE's opinion is not sufficient to arrive at a fair rating.

Users of this rating (including investors, lenders and the public at large) are hence requested to exercise caution while using the above ratings.

CARE has also withdrawn the rating assigned to the proposed bank facilities of SPL with immediate effect at the request of the company as the company has not availed the aforementioned proposed bank facilities rated by us and there is no amount outstanding under the proposed facilities as on date.

Detailed description of the key rating drivers

At the time of last rating on July 09, 2020 the following were the rating strengths and weaknesses (updated for the information available from the stock exchange):

Key Rating Strengths

Long and satisfactory track record of operations

Initially promoted by LANCO group of Hyderabad, SPL was acquired by Kolkata based Electrosteel Castings Limited (ECL) in March 2002. The company is a part of the Electrosteel Group, Kolkata, which has interest mainly in the manufacturing of DI pipes and fittings. The group has a track record of more than six decades of operations.

Established position of the group in the domestic DI pipe segment with favorable location of the plant

SPL predominantly operates in Southern India with its manufacturing unit located at Srikalahasthi, a small town in Andhra Pradesh. It has close proximity to sources of major raw materials- imported coking coal through Vizaag port and iron ore from mines of Karnataka. In addition, due to presence of limited players in the southern region, SPL has a significant advantage over others in terms of freight cost. SPL along with ECL hold dominant position in the domestic DI pipe market with an aggregate DI pipe production capacity of 5,80,000 mtpa (SPL-3,00,000 mtpa and ECL – 2,80,000 mtpa).

High capacity utilization albeit same was impacted in Q1FY21 (refers to period April 1 to June 30)

The capacity utilization of the DI pipe continued to be more than 95% in FY20. The pig iron facility, majorly a backward integration for the manufacturing of DI pipes, achieved utilization of more than 100% in FY20.

The capacity utilization of the DI pipe division had decreased to 35% in Q1FY21 due to lockdown and subsequent absenteeism in the plant.

Improvement in profitability in FY20, however, financial performance impacted in Q1FY21

The income from operations increased by 6.61% y-o-y in FY20 driven by increase in gross realizations of DI pipes (even though volumes moderated marginally) and by increase in sales of SPL's intermediate manufactured products like coke, ferro alloys and pig iron.

¹Complete definition of the ratings assigned are available at www.careratings.com and other CARE publications

The PBILDT margin improved from 12.50% in FY19 to 16.08% in FY20 on account of higher realizations and improved efficiency measures resulting in lower consumption of iron ore/fines and coking coal. With higher operating profit, the interest coverage improved from 4.84x in FY19 to 5.82x in FY20, even though there was increase in finance cost. The total operating income in Q1FY21, declined y-o-y by 57% and q-o-q by 51% due to lower sales in Q1FY21. Consequently due to under absorption of fixed costs, the company reported loss at the operating level in the quarter. Interest income helped support interest obligation and resulted in positive cash accruals in the quarter, despite the PBILDT level loss.

Comfortable capital structure

The capital structure continued to be comfortable with overall gearing of 0.45x as on March 31, 2020 (0.48x as on March 31, 2019) and Total Debt/GCA of 2.92x as on March 31, 2020 (3.69x as on March 31, 2019).

Liquidity: Strong

SPL's liquidity position is strong marked by free fixed deposits which stood at about Rs.360 crore as on May 31, 2020. However, same is expected to reduce with the company utilizing the same for capex in FY21 and FY22. The company has not availed any moratorium from its banks. In FY20, it had earned a GCA of Rs.218 crore and had met term debt obligation of Rs.34 crore. It has a term debt repayment of Rs.44 crore in FY21 and cash accruals in the year are expected to be sufficient to meet such payments. Liquidity is also supported by unutilized lines, where average utilization stood at 61% of fund based limits of Rs.289 crore (on an average basis) for the last 12 months ended May 2020.

Key Rating Weaknesses

Increased working capital intensity of operations

Working capital intensity increased in FY20 marked by operating cycle of 121 days over 102 days in FY19, majorly due to increase in receivables. This also led to negative cash flow from operations for the company in FY20 despite increase in GCA over FY19.

Project Risk

In its ongoing projects, SPL has commissioned the 9x2 MVA ferro alloy plant at a cost of Rs.63 crore in FY20. It has further planned capex of about Rs.450 crore to increase the capacity of DI pipes from 300,000 mtpa to 500,000 mtpa. The capex would also include increase in capacity of sinter plant, mini blast furnace (from 275,000 mtpa to 500,000 mtpa), finishing line and other auxiliary capex. The capex is expected to be funded through a term loan of Rs.200 crore (financial closure obtained) and balance through internal accruals and the company's existing liquid reserves. Earlier the company had proposed to finance the project entirely through internal sources.

Given the amount of expected investments, there exists project execution, stabilization and marketing risks.

Volatility in input price

Raw material consumption is the single largest cost component for SPL. With company having no backward integration for its primary raw materials (such as coking coal, iron-ore), it has to resort to open market purchases at the prevailing market prices. Hence, any adverse movement in raw material price without any corresponding movement in finished good price might affect the performance of the company.

Foreign exchange fluctuation risk

SPL sources majority of its raw material requirements (coking coal) through imports and with negligible exports, SPL is a net importer, thus exposing it to foreign exchange fluctuation risk. Moreover, to part fund its capex programme in the past, the company has availed ECBs. However, since SPL hedges its foreign currency exposure related for import of coking coal and current portion of repayment obligations of ECB loans; foreign exchange fluctuation risk is mitigated to a certain extent.

Analytical approach: Standalone

About CARE Ratings:

CARE Ratings commenced operations in April 1993 and over two decades, it has established itself as one of the leading credit rating agencies in India. CARE is registered with the Securities and Exchange Board of India (SEBI) and also recognized as an External Credit Assessment Institution (ECAI) by the Reserve Bank of India (RBI). CARE Ratings is proud of its rightful place in the Indian capital market built around investor confidence. CARE Ratings provides the entire spectrum of credit rating that helps the corporates to raise capital for their various requirements and assists the investors to form an informed investment decision based on the credit risk and their own risk-return expectations. Our rating and grading service offerings leverage our domain and analytical expertise backed by the methodologies congruent with the international best practices.

Disclaimer

CARE's ratings are opinions on the likelihood of timely payment of the obligations under the rated instrument and are not recommendations to sanction, renew, disburse or recall the concerned bank facilities or to buy, sell or hold any security. CARE's ratings do not convey suitability or price for the investor. CARE's ratings do not constitute an audit on the rated entity. CARE has based its ratings/outlooks on information obtained from sources believed by it to be accurate and reliable. CARE does not, however, guarantee the accuracy, adequacy or completeness of any information and is not responsible for any errors or omissions or for the results obtained from the use of such information. Most entities whose bank facilities/instruments are rated by CARE have paid a credit rating fee, based on the amount and type of bank facilities/instruments. CARE or its subsidiaries/associates may also have other commercial transactions with the entity. In case of partnership/proprietary concerns, the rating /outlook assigned by CARE is, inter-alia, based on the capital deployed by the partners/proprietor and the financial strength of the firm at present. The rating/outlook may undergo change in case of withdrawal of capital or the unsecured loans brought in by the partners/proprietor in addition to the financial performance and other relevant factors. CARE is not responsible for any errors and states that it has no financial liability whatsoever to the users of CARE's rating.

Our ratings do not factor in any rating related trigger clauses as per the terms of the facility/instrument, which may involve acceleration of payments in case of rating downgrades. However, if any such clauses are introduced and if triggered, the ratings may see volatility and sharp downgrades.
